

LUCKINS™

Product & Pricing Data For MEP Contractors

The UK's leading specialist in product and pricing data
for the MEP sectors

- Accurate, reliable and comprehensive product and price data for use in estimating, procurement, contract management, service and maintenance systems and on-site.
- The key to profitable contracting and realising the benefit of your IT investment.

► Luckins Product & Price Data for Estimating, Procurement & Business Systems

Luckins data offers reliable, accurate and comprehensive catalogues of product and price data, which have been an essential part of contractors' business processes for 50 years.

- Data sourced directly from manufacturers
- Aggregated, checked & validated
- Consistent format
- Fully indexed by manufacturer, product range & commodity
- Over 1.4 million current product lines from 750 manufacturers
- Choice of standard or bespoke database
- Weekly updates

The screenshot shows the Luckins Product Search application. At the top, there are search filters and a search bar. Below the search bar, there are several panels: 'Manufacturer' (listing various companies like Belimo Automation UK Ltd), 'Major Product Range' (listing categories like Junction Boxes), and 'Minor Product Range' (listing specific products like Ceiling Roses & Pendant Sets). At the bottom, there is a table of search results with columns for Manufacturer, Catalogue Number, Product Description, Dimensions, Trade Price, Discount, Net Price, L.A., Subcontract Cost, and Type Of Measure. The table lists various electrical products such as Control Switches, Dimmer Switches, and Sockets.

1. Search by manufacturer's catalogue number or keyword
2. Search by product range
3. Industry standard installation time
4. Unit of Measure
5. Manufacturer's trade price(s)
6. Product description
7. Manufacturer's catalogue number
8. Search by product category

► Comprehensive Coverage & a Choice of Databases

- A choice of UK Electrical, Mechanical or Combined databases is available to suit business needs
- IT & security product data also available
- Databases for procurement contain a wide range of tools, fixings and consumables in addition to installation products
- Electrical database available for Republic of Ireland
- Extensive MEP database covering products available in Middle East Gulf States

► Enriched Product Data

Using Luckins data in an estimating or business system also comes with the benefit of access to rich product data held in LUCKINSlive. Product images, catalogue pages and technical data sheets can be viewed quickly and easily from within the estimating system.

Manufacturers' catalogue pages

Technical data sheets

Product images

A Luckins data licence also gives you the ability to register and see rich product data and price data directly on LUCKINSlive – an invaluable additional asset for material sourcing and price checking.

► Comparison

In-House Database Maintenance

- Data from many sources
- Data in multiple formats
- Need to chase suppliers
- Data not checked
- Data not indexed
- No single unique product code

Luckins Data

- Data from a single source
- Data in consistent format
- Data updated regularly
- Data checked & verified
- Data fully indexed for easy look-up
- Industry standard unique TSI Code

► System Compatibility

Luckins data can be used in conjunction with the Trimble MEP range of specialist MEP contractors' software and with selected third party systems.

► Electronic Trading & Data Exchange

Luckins data is widely used by wholesalers and distributors as the basis for their ERP systems and e-commerce websites. Many of these can output customer-specific discount and net price data linked to the Luckins TSI code in a format suitable for uploading into Trimble MEP's estimating and procurement software.

Luckins' unique item identifier, the TSI Code, is the ideal tool to synchronise sales discounts and net prices with your suppliers leading to huge savings in system set up and maintenance. Using Luckins data as the basis for data exchange and e-trading ensures that both parties are using consistent current data, minimising errors and invoice queries as well as reducing transaction costs throughout the supply chain.

Part No	TSI Code	Description	Net Price	Expiry Date	Discount	Sales UOM
75900	399435344	PY TT1/TT270 35mm Straight Coupling			45%	1
75901	399435399	PY TT1/TT270 42mm Straight Coupling			45%	1
75902	399435409	PY TT1/TT270 54mm Straight Coupling			45%	1
75903	399435412	PY TT2/TT270G 35mmx1.1/4in Straight Conn	25.38	07-Dec-16		1

75909	399435522	PY TT6/TT243 35x15mm Male Reducer			45%	1
75910	399435577	PY TT6/TT243 35x22mm Male Reducer			45%	1
75911	399435580	PY TT6/TT243 35x28mm Male Reducer			45%	1

Using the Luckins TSI Code as the key discount data and net prices can be transferred accurately and efficiently between the distributor and contractor, and uploaded directly into the contractor's estimating or procurement system

► The TSI Code

Every item in the Luckins database is identified by a unique numeric code, the TSI Code, enabling quick and accurate data loading and synchronisation with customers' systems. The TSI Code is never re-used and can be safely used to identify products long after obsolescence.

► Installation Times

The Luckins operative-hour installation times have been developed with input from manufacturers, contractors and independent specialists. Installation times are included in the Luckins contractors' databases and are also available in two handy paperback publications.

► Price Data on LUCKINSlive

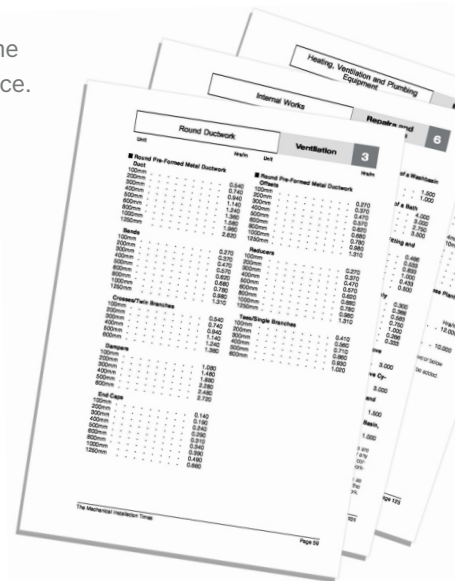

A subscription to view manufacturers' trade prices on LUCKINSlive is the ideal reference for rapid price and invoice checking.

► The Complete Service

Luckins data is available in a range of standard databases but most of the larger and more specialised contractors choose a bespoke database tailored to their precise business requirements.

A bespoke database may contain suppliers chosen from the central Luckins database plus additional suppliers if required sourced on request by the customer.

In addition, a range of additional services is offered including discount/net price upload and management of customers' estimating databases.
