

## Case Study: SWT West Midlands

### Project Brief

MIDFIX was appointed to provide a support solution for pipework covering a circular sewage treatment tank in the West Midlands.

### Solution

We provided a concept design solution of a pipe support bridge using Sikla Framo measuring 9 x 2.5 metres. Particular focus was paid on the size of the tank, the pipework structure and fluid loads. Once the concept was approved, revised designs were engineered using the accurate calculations, structural analysis and loads.

The final design was prefabricated in our workshop and delivered to site for installation.
