

Whether it's saving **energy** or **wildlife**, Fern-Howard are happy, and **proud**, to help.

When you find a sickly squirrel, or an under-the-weather woodpecker what do you do?

After

Saving
£125
Per Year

Well, if you live in Hampshire and surrounding counties, you call HART Wildlife Rescue. A registered charity, HART's wildlife hospital provides vital rescue, treatment and rehabilitation for wildlife. But their base in Lower Soldridge near Alton, Hampshire was also in need of a little TLC; especially when it came to lighting.

So, lighting manufacturer Fern-Howard, also based in Alton, stepped in and helped them out; donating and installing new LED battens in corridors and treatment rooms, new LED bulkheads into their reception area and Exodus Emergency Bulkheads throughout the premises.

Before

Product Installed:
Linear LED, PremaLine®

All of which means not only are HART better placed to save wildlife, they're also able to save energy and keep their critical running costs low. Before Fern-Howard's help they were using **710W** – now its **479W**. That's around **£125.65 per year saved** when re-lamping costs are factored in.
