

Big Foot Systems

Low Cost, Big Results, No Limits

Big Foot Systems designs and manufactures freestanding systems to support plant equipment and services installed on flat roofs. Big Foot support products provide quick, versatile and economical solutions for HVAC, solar units and access equipment with its simple, safe and secure non-penetrative, prefabricated roof support systems.

Big Foot Systems has been making a significant imprint in the market since its inception in 2001; it now sells internationally through distributors in 15 countries.

The Big Foot Systems range

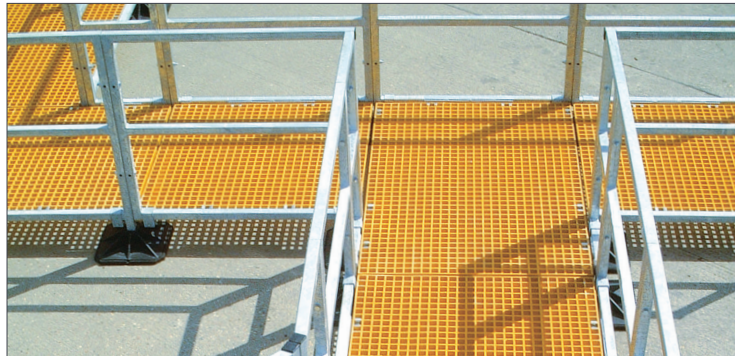

- **Safe Access:** Custom and standard site assembled, safe access walkways, platforms and step-over solutions
- **Solar Support:** Independent ballasted mounting systems for solar panels and supporting services
- **HD Support:** Robust support solutions for large and heavy mechanical and electrical services
- **LD Support:** Quick to assemble, level frameworks for supporting air handling units and air conditioning systems
- **Services Support:** Versatile support solutions for duct runs, pipework and cable trays

Why Bigfoot?

- Non-penetrative, prefabricated, versatile plant and services support systems
- Quick and easy to install products and systems ensure project cost and time clarity and reduces the need for complex, time-consuming and expensive detailing
- Improved roof aesthetics with neat and tidy, engineered solutions that are robust and repeatable
- Market leading products and services including system design and on-site support
- Install in all weathers utilising familiar componentry, all systems designed with safety, security and simplicity in mind

'Quicker and cheaper than concrete'

The company launched in the UK in 2001 with the introduction of simple frameworks to support condensing units.

The company's aim was to provide an easy and economical alternative to poured concrete and concrete blocks for supporting plant on a flat roof without penetrating or damaging the roof surface. The result was a cheaper, safer, less intrusive and quicker to install alternative to concrete.

The on-site flexibility of the framework systems proved popular and the product range was developed to include cost effective supports for duct and pipework runs. Two simple walkway systems were also added to offer a secure route for service engineers and other personnel.

Complete support solution for flat roofs

The company now offers a complete support solution for plant equipment on flat roofs. Most installations use Big Foot Systems' standard range of modular frameworks but it also works on large-scale bespoke projects: All Big Foot Systems need is a roof drawing or weights and dimensions of the roof plant in order to prepare a quotation.

Big Foot Systems boasts an experienced technical support team, setting the standard on any installation while meeting the needs of architects, consultants, engineers and contractors.

Big Foot Systems support frames

Systems are typically made of box-section galvanised steel frames and galvanised steel strut mounted on non-penetrative Big Foot Adjustable Legs with Anti-Vibration Mats or Big Foot Fix-It Feet.

Global clients

Big Foot Systems has been used on countless prestigious projects and has an extensive list of high profile clients.
