BOSCH
Invented for life

Hammer and stone drilling, chiselling

BOSCH
Invented for life

Accessory range

Overview

Innovative and efficient products ensure successful sales.
The research and development departments at Bosch work to continously develop and optimise accessories in line with the needs of professionals.

The metal drill bit range

Metal and wood drilling
Accessories for screwdriving
Machine accessories
Cordless working
Work safety

The circular saw blade range

Circular sawing
Routing

The concrete and masonry range

Hammer drilling
Masonry drilling
Chiselling

The jigsaw blade range

Jigsawing
Sabre sawing
Multi-cutters
Holesawing

The diamond accessory range

Diamond cutting
Diamond grinding heads
Diamond drilling

The abrasives range

Sanding and polishing
Cutting and grinding
Brushing

Drilling

Bosch:

Pioneer in drilling for maximum efficiency

As a leader in innovation, Bosch continually sets new standards with drill bits 'Made in Germany'. From the invention of the SDS system to the unique in-house production of carbide, Bosch always stands out from the competition. Due to groundbreaking innovations, drilling is made more efficient.

In 1975 Bosch developed the SDS-plus system, which has been an industry standard for precise and reliable drilling ever since. SDS-plus is known as the drill bit insertion system that guarantees better power transfer and, unlike other systems on the market, enables fast changing of drill bits and chisels.

Other pioneering innovations include the first 4 cutter SDS-max drill bit – Quadro X and the first bit with 4 flute technology–SDS-plus S4. Our focus has always been on developing products to combine efficient work and high quality.

Today, Bosch are the only manufacturer who can control the blend of carbide they use. This is in order to achieve the ideal balance between hard and soft tungsten carbide. In addition, the innovative diffusion bonding technology ensures that the flute joins the carbide, therefore meeting the highest customer requirements.

What Bosch can offer is a broad selection of different types of drill bits with outstanding longevity and maximum reliability.

Invented by Bosch, for maximum efficiency.

Make good drill bits great –

key properties that affect the quality of a drill bit

There are a number of drill bits with a variety of different properties. This makes it difficult to judge which bit is suitable for your requirements. Below is a list of key properties and their explanations.

Key properties

What features contribute to a high quality drill bit

Long life/Robustness

Carbide

High-quality raw material and manufacturing process.

Steel

High-alloy steel and optimised hardening technology. In addition to this, fast material removal through the flute must be ensured to prevent heat development and the resulting wear.

Clean, precise drilling

Drill bit head

Active centring for precise drilling in concrete.

Cutting edges

The number of cutters determines which material can be drilled into (e.g. 4-cutter for rebar).

Material extraction

Flute

Diameter optimised design to reduce dust explosions.

Mounting system

Shank system

SDS-plus/SDS-max and the new Power Grip System ensure that 100 percent of the machine's power is transferred to the drill bit, which also makes it easier to change the bit.

The first point of contact: **the drill bit tip**

The tip has two main functions:

1. Centring the drill bit to prevent it from wandering.
2. Grinding the concrete into fine dust which can be easily removed from the drilled hole.

Centring tip

The exposed centre area of the cutting edge is for active centring and provides guidance while drilling.

- Without a ground tip or centring area, the bit will wander on glazed surfaces and as a result the dimension of the hole would no longer be in the tolerance range.

activeQ

Cutting edge

Shaped cutters ensure: high performance; largest demolition force; fast speed and long lifetime.

- The application and material define if the cutters need to be shaped or diamond ground to determine the performance of the drill bits.

Relief grooves (V on cutting edge)

The dust is directed into the flute to avoid a jam in the bottom of the borehole.

- High-quality 2-cutter drill bits feature relief grooves to ensure efficient work progress.

Bosch drill bits bear the test mark from Prüfgemeinschaft Mauerbohrer e.V. (masonry drill bit testing association) (PGM). **The PGM seal is the guarantor for:** compliance with tight tolerances, exact drilled holes and firm hold of fixings

Wear mark

The visibility of the wear mark indicates if the diameter of the hole is still in tolerance for metal anchor setting.

- High-quality drill bits feature wear marks, which keeps the costs per drilled hole low.

High impact on lifetime: the drilling head

The composition and quality of the carbide have an influence on the number of holes the drill bit can drill within the tolerance range, which ultimately affects the lifetime of the bit. The last production step of the bonding or brazing technology is equally important. It is used to bond the carbide to the drill bit's flute.

Carbide design

The design of the carbide affects the lifetime of the drill bit and defines the variety of materials that can be cut.

- The higher the number of cutters, the better the bit will drill into hard materials and reinforced concrete.

There are 4 different types of cutters:

2-cutter, brazed

= Standard lifetime

3- or 4-cutter, brazed

- Less wear than 2-cutters
- = Longer lifetime, less jamming in rebar

3- or 4-cutter full head, bonded

- Twice the performance of 2-cutters in hard materials
- Twice as many cutting edges as 2-cutters
- = Longer lifetime, less jamming in rebar

5-cutter full head, diffusion bonding

- Performance in hard materials is 3 times better than 2-cutters = Best lifetime
- Twice as many cutting edges as 2-cutters
- = High drilling speed
- The cutter construction ensures better performance without jamming in rebar than 3 or 4-cutters
- = 3 times longer lifetime/best wear resistance

Carbide composition

Carbide is a blend of tungsten carbide, cobalt and natural additives.

- A high percentage of tungsten carbide and a small grain size increase the lifetime and the wear resistance of the bit.

The lifetime of the carbide is defined by two variables:

1. The concentration of tungsten carbide in the grain mixture defines the hardness of the carbide.
2. The grain size of the carbide defines the resistance of the cutting edges. The smaller the grain size, the harder the surface.

Recycled carbide

= Poor lifetime

Standard carbide

= Good lifetime

High durable carbide

- Higher percentage of carbon in the blend
= Long lifetime

Fine grade high durable carbide

- High percentage of carbon in the blend and small grain size = Exceptional lifetime

Bonding process (flute and carbide)

Depending on the brazing material and the process, the bond may not be able to withstand certain thermal loads and may lose its stability. The drill bit can heat up to over 400 °C when drilling in natural stone or rebar.

- The bonding process therefore affects the lifetime of the drill bit (attachment of the drilling head).

There are 5 common bonding processes:

Belt oven brazing and hardening

- Brazing and heat treatment in one process. Finding the optimum temperature for simultaneous brazing and hardening is a compromise at the expense of the product.

Induction brazing

- Standard brazing operation to connect the carbide tip with the flute.

Vacuum brazing and hardening

- Brazing in vacuum conditions, especially developed for large diameters. Brazing is performed in the first step followed by hardening to reduce thermal loads.

AWB brazing and hardening

- Diameter optimised brazing and hardening technology to increase the durability of the drill bit and simultaneously reduce the vibration during drilling.

Diffusion bonding

- Molecular bonding between the full head carbide and the flute of the drill bit. This technology provides the exceptionally strong bond to withstand the drilling force, e.g. when you hit rebar.

Effective dust transportation: the flute

The design of the flute is defined by a) the number of flutes, b) the core section of the drill bit and c) the size of the channels. It is important to find the right balance between an easy dust removal, optimum power transfer from the rotary hammer to the drill bit, and the optimum lifetime of the bit according to what you require.

2-flute L-shape (standard)

- Standard performance.

2-flute U-shape

- Highly efficient drilling dust removal in abrasive materials.

4-flute dura design

- Reinforced core section for high wear resistance and stability when drilling in concrete.

2-flute vario design

- Short, variable incline for easier drilling and less friction than U-shape flute in building materials.

4-flute turbo design

- Improved dust removal for smooth drilling in concrete. The stronger core section increases the lifetime of the drill bit.

2 + 2 flute design

- Vibration-optimised flute design for the best power transfer from the rotary hammer to the full carbide head. The incline of the flute ensures stability and can remove large metal chips when drilling through rebar.

Quick mounting and 100% power transfer: **the shank system**

A mounting system is an important criteria for a professional drill bit. Bosch has and will continue to invent better solutions for the user.

1975

Bosch invented the SDS-plus system (shank size 10 mm) and revolutionised the way professionals can fix drill bits in small class hammers (< 5 kg).

1985

Bosch invented the SDS-max system (shank size 18 mm) for large rotary hammers (≥ 5 kg) to reap the same benefits of quick mounting and increased power transfer.

2012

Bosch launches the new Power Grip System for cylindrical shank drill bits. It enables 100% power transfer from the machine to the drill bit.

Bosch offers the right solution – based on your needs and applications

Increase in performance in new generation rotary hammers

The increase in performance, which is due to higher joules, provides a sustained boost in impact force and guarantees fast drilling speeds. A new generation of drill bits have been designed to meet the requirements of the new system to assure the rotary hammer can reach its full potential.

It is therefore crucial to select the right drill bit.

SDS-plus-7: 3x lifetime and precise drilling even in rebar

5-cutter full head carbide

Shaped cutters for highest demolition force, exceptional lifetime and best wear resistance. No jamming in rebar

activeQ

Active centring tip for active cutting in concrete (Pat. pending). Special cutting edge and angles to grind the concrete into fine dust

2 + 2 flute design

Vibration-optimised flute design for the best power transfer and speed

New rotary hammers are becoming more powerful, in order to achieve faster drilling speeds.

SDS-plus-5: user-friendly drilling without stalling and stopping

Carbide relief grooves

Special V-shaped design for faster dust transportation into the flute, in order to prevent clogging at the base of the drilled hole

activeQ*

Active centring tip for active cutting in concrete (Pat. pending). Special cutting edge and angles to grind the concrete into fine dust

4-flute turbo design

Patented 4-flute design to efficiently remove dust

CYL-1

Optimised drilling

Standard carbide
Standard lifetime/
wear resistance

2-cutter
Standard

2-flute U-shape
Standard lifetime/
Good dust removal

CYL-1 masonry drill bits**CYL-1**
IMPACT

- **Suitable for** drilling holes in masonry and limestone
- Can be used with all impact drills
- Carbide tipped impact drill bit, manufactured to ISO 5468
- Drill bit colour: silver-grey

CYL-9 MultiConstruction

Drilling in all kinds of materials

Centring tip
For a precise drilling start
and good guidance in the
drilled hole

**Fine grade high
durable carbide**
Extra-long life/
Best wear resistance

**2-cutter, AWB
brazing and hardening**

Diameter-optimised brazing and
hardening technology to increase
the robustness of the drill bit and
reduce the vibration during drilling

**Diamond-ground
cutting edges**

Special ground tip enables
multi-purpose drilling

4-flute dura design

Reinforced core section for better
wear resistance and stability when
drilling in concrete

CYL-9 Multi Construction multi-purpose drill bits

CYL-9 MultiConstruction

MULTI CONSTRUCTION

- **Suitable for** practically all materials in interior fitting work, e.g. concrete, masonry, brick, eternit, light building materials, multi-layer materials, ceramics and tiles, wood, plastic, sheet metals, aluminium
- Perfect results when drilling with or without impact
- Drill bit colour: blue, polished

CYL-9 Ceramic tile drill bits

CYL-9 Ceramic

expert  Ceramic

- **Suitable for** all soft to medium density tiles, porcelain, ceramics and non-toughened glass
- Drill bit colour: white
- **Note:** Use with low speeds and without impact. No cooling required

Optimum drilling

Long lifetime

User-friendly drilling

3 times longer
lifetime and higher
precision

Rebar

For switch boxes

●/●● = good

●●●/●●●● = better

●●●●● = best

SDS-plus-7

3x lifetime and precise drilling even in rebar

activeteq
Active centring tip
for active cutting in
concrete

Fine grade high durable carbide
Long lifetime/
Best wear resistance

Wear mark

The visibility of the wear mark indicates if the diameter of the hole is still in tolerance for metal anchor setting

5-cutter full head carbide, diffusion bonding technology

Shaped cutters for highest demolition force, exceptional lifetime and best wear resistance. No jamming in rebar

2 + 2 flute design

Vibration-optimised flute design for the best power transfer and speed

SDS-plus-7 hammer drill bits

plus-7
X5L

Speed X

long LIFE x3 **fast DRILL**

- **Suitable for** masonry, concrete and reinforced concrete
- **Appropriate for** all rotary hammers with SDS-plus holder

 Pack quantity
(Pieces per pack)

 Minimum order quantity. The minimum order quantity is a fixed quantity of packs.
Orders are carried out only in multiples of the minimum order quantity.

SDS-plus-5

Smooth drilling without stalling and stopping

activetec*
Active centring tip
for active cutting in
concrete

High durable carbide
Good lifetime/wear resistance

Wear mark

The visibility of the wear mark indicates if the hole diameter is still in tolerance for metal anchor setting

* Diameter ≤ 10 mm

**2-cutter, AWB
brazing and hardening**

Diameter-optimised brazing and hardening technology to increase the robustness of the drill bit and reduce the vibration during drilling

Carbide relief grooves

Special V-shaped design for faster dust transportation into the flute in order to prevent clogging at the base of the drilled hole

4-flute turbo design

Patented 4-flute design to efficiently remove dust

SDS-plus-5 hammer drill bits

plus-5
S4L

- **Suitable for** masonry, concrete
- **Appropriate for** all rotary hammers with SDS-plus holder

SDS-plus-9 RebarCutter

Especially designed for drilling in rebar

SDS-plus-9 Rebar Cutter

plus-9 RebarCutter ▶ **Suitable for rebar in concrete**

- ▶ For non-impact use in rotary hammers with SDS-plus holder
- ▶ Only cut through rebar if approval has been issued by a structural engineer
- ▶ Only use the Rebar Cutter without impact

(Pieces per pack)

Minimum order quantity. The minimum order quantity is a fixed quantity of packs. Orders are carried out only in multiples of the minimum order quantity.

SDS-plus-9 CoreCutter

For switch boxes

Fine grade high durable carbide
Long lifetime/
Best wear resistance

Asymmetric carbide teeth
The number of cutters is adapted to the diameter

SDS-plus-9 Core Cutters

plus-9 CoreCutter ▶ Suitable for concrete, masonry and limestone

▶ For use with SDS-plus or hex shank

Long lifetime

Fast drilling

For large holes

For switch boxes

Long lifetime
in natural stone

●/●● = good

●●●/●●●● = better

●●●●● = best

SDS-max-7

Highest drilling speed

activeteq
Active centring tip
for active cutting in
concrete

Fine grade high durable carbide
Extra-long life/
Best wear resistance

**Wear
mark**

The visibility of the wear
mark indicates if the hole
diameter is still in tolerance
for metal anchor setting

4-cutter; solid carbide

Extremely robust and aggressive solid
carbide S-cutter and inclined side
cutters for an aggressive drilling rate

2 + 2 flute design

Vibration-optimised flute design for
the best power transfer and speed

SDS-max-7 hammer drill bits

max-7

Speed X

- **Suitable for** concrete and reinforced concrete, limestone, masonry
- For use in rotary hammers with SDS-max holder
- Working lengths of 200, 400, 600, 800 and 1200 mm
- * 12 to 15 mm diameter bits are two-cutters
- Reusable packaging

SDS-max-9 BreakThrough

For drilling large holes

SDS-max-9 Break Through drill bits

- max-9 BreakThrough** ▶ **Suitable for** breakthroughs with diameters from 45 mm to 80 mm in concrete, masonry, limestone, e.g. for fixing cables and pipes outside
- ▶ One-piece tool, bell shaped head with asymmetrically positioned carbide pins and centre cutter
- ▶ Large-volume spiral flute, tapered shank
- ▶ **Note:** Always ensure you use hammer drills with suitable capacity for breakthrough drill bits to avoid overload. Observe the operating instructions of the rotary hammer

SDS-max-9 CoreCutter

For switch boxes

SDS-max-9 Core Cutters, one-piece

max-9 CoreCutter

- **Suitable for** concrete, masonry and limestone
- One-piece design guarantees optimum transfer of the machine's power
- Aggressive work progress and simultaneously very quiet during operation thanks to the asymmetric teeth arrangement

Chiselling

100% Bosch:

the new SDS-max RTec Sharp flat chisel and
SDS-max RTec Speed pointed chisel

The particularly long, self-sharpening cutting edge has been further enhanced:

- To remove more material in less time
- To keep a consistently high removal rate over the chisel's entire lifetime
- To work efficiently without downtimes and time-consuming resharpener

Increased power output

- No jamming
- Lifetime of 100 hours
- 30% higher material removal rate than standard pointed chisels

Double material removal rate

- 100% longer lifetime due to the new self-sharpening cutting edge. Therefore removes twice as much material

High blast power

Bosch RTec Speed

Additional impact energy

- The patented reflection element increases the power output: the recoil energy is converted into additional impact energy
- For an increase in material removal

The right chisel for any application

Bosch is a strong partner for specialist retailers thanks to its innovative, high-quality tools for working in concrete. With many years of experience in production, state-of-the-art manufacturing technologies and continual development work, Bosch stands for high quality with a power of innovation. Furthermore Bosch offers

the perfect solution for every application: chisels for all conventional shanks and all brands of rotary and demolition hammer. This gives specialist retailers an impressive alternative to the chisels offered in direct distribution.

SDS-plus for hammers < 5 joules For renovating and restoring

Page 69

Type	Application
Pointed chisel Flat chisel (targeted chiselling)	Adjustment work in masonry and concrete Restoring joints Clearing reinforcements
Spade chisel 40 and 60 mm	Removing roughcasting and layers of dirt Removing concrete residues from formwork boards Restoring steel
Tile chisel	Removing wall and floor tiles
Hollow gouging chisel	Cutting narrow channels in concrete
Winged gouging chisel with channel depth control	Cutting channels in masonry
Pointing chisel	Repointing bricks
Wood chisel	For general carpentry work

SDS-max for hammers < 25 joules For renovation, restoration, breakthroughs, mortising and demolition work

Page 71

Type	Application
Pointed chisel Flat chisel (targeted chiselling)	Mortising and demolition work in masonry and concrete Adjustment work in masonry and concrete Restoring joints Clearing reinforcements
Spade chisel 50 to 115 mm	Removing roughcasting and layers of dirt Removing concrete residues from formwork boards Restoring steel
Tile chisel	Removing wall and floor tiles
Hollow gouging chisel	Cutting narrow channels in concrete
Gouging chisel	Cutting channels in masonry
Winged gouging chisel with channel depth control	Cutting channels in masonry
Pointing chisel	Repointing bricks
Excavation chisel	Digging in hard, compacted soil

Type	Application
Asphalt cutter	Restoration of asphalt coverings
Earth rod driver	Driving in earth rods
Tamping plates	Compacting soil and gravel
Bush hammer heads	Roughing up concrete and asphalt

22 mm hexagon (HEX) appropriate for TE-S system

For breakthroughs, demolition work and correction work

Page 73

The Bosch ordering and packaging control system

The ordering and packaging control system makes it easier to order the right amount and find the packaging type at a glance.

Order quantities are rounded up to the minimum order quantity.

$$2 \times \begin{array}{|c|} \hline \text{PQ} \\ \hline \end{array} = \begin{array}{|c|} \hline \text{MOQ} \\ \hline \end{array}$$

Order quantity PQ MOQ

Order quantities must be a multiple of the minimum order quantity:
3, 6, 9, etc.

$$6 \times \begin{array}{|c|} \hline \text{PQ} \\ \hline \end{array} = \begin{array}{|c|} \hline \text{MOQ} \\ \hline \end{array} \begin{array}{|c|} \hline \text{MOQ} \\ \hline \end{array}$$

Order quantity PQ MOQ MOQ

For example:

Step 1: The packaging type for each part number can be found on the product pages:

Part number	Packaging type	Pack quantity	Minimum order quantity ¹	Barcode
2 608 585 780	P1p	1	1	511421
2 608 585 781	P1p	1	1	511438

Step 2: An illustration of the corresponding packaging type and specifications about the type of suspension and form of the packaging can be found on the back cover.

P1p Watchbox with Euro hole

P2p Watchbox with other type of suspension

Step 3: What is the structure of a packaging type code?

1 ——— **C1a** ——— 2
3

1. There are six different material groups which are identified by the initial letter in the English packaging code:

Packaging made of paper, cardboard or corrugated board (**C**ardboard)
Plastic packaging (**P**lastic)
Combined plastic/cardboard packaging (**P**lastic and **C**ardboard)
Metal packaging (**M**etal)
Unpacked product (**U**npacked)
Wood packaging (**W**ood)

2. Each packaging has one of three different types of suspension:

0 without any type of suspension
1 with Euro hole
2 other type of suspension

3. In the six material groups, each form of packaging is identified by a lower case letter:

C Packaging made of paper, cardboard or corrugated board

a Box d Sleeve
b Folded carton e Hanger
c Pocket f Paper bag

h Tube
k Carton with sleeve

P Plastic packaging

a Box e Hanger
b Bag f Shrink-wrapped
c Pouch h Tube
d Bag with tab card k Cassette

n Sleeve
p Watchbox

PC Combined plastic/cardboard packaging

a Blister c Shrink-wrapped carton
b Folding blister d Tight Pack

U Unpacked product

No form specifications

W Wood packaging

a Case

Packaging

that conveys clear information

Packaging made of paper, cardboard or corrugated board (**C**ardboard)

C0a Box without any type of suspension

C0f Paper bag without any type of suspension

C0h Tube without any type of suspension

C2h Tube with other type of suspension

Combined plastic/cardboard packaging (**P**lastic and **C**ardboard)

PC1a Blister with Euro hole

PC1b Folding blister with Euro hole

PC1c Shrink-wrapped carton with Euro hole

Unpacked product
(**U**npacked)

PC1d Tight Pack with Euro hole

U0 Without any type of suspension

Plastic packaging (Plastic)

P0a Box without any type of suspension

P1a Box with Euro hole

P0b Bag without any type of suspension

P1c Pouch with Euro hole

P1e Hanger with Euro hole

P1f Shrink-wrapped with Euro hole

P1h Tube with Euro hole

P1k Cassette with Euro hole
