BOSCH
Invented for life

Accessory range

Overview

Innovative and efficient products ensure successful sales. The research and development departments at Bosch work to continuously develop and optimise accessories in line with the needs of professionals.

The metal drill bit range

Metal and wood drilling
Accessories for screwdriving
Machine accessories
Cordless working
Work safety

1

The circular saw blade range

Circular sawing
Routing

4

The concrete and masonry range

Hammer drilling
Masonry drilling
Chiselling

2

The jigsaw blade range

Jigsawing
Sabre sawing
Multi-cutters
Holesawing

5

The diamond accessory range

Diamond cutting
Diamond grinding
Diamond drilling

3

The abrasives range

Sanding and polishing
Cutting
Grinding and brushing

Sanding
and polishing

The new abrasives range from Bosch: **Evolution instead of revolution**

Bosch utilises over 130 years of experience when developing innovative abrasives. In close cooperation with international partners, such as paint and varnish manufacturers, Bosch first researches different customer needs. The results of these surveys are used by research and development as the basis for innovative abrasives.

From grit coating through to the final product, each subprocess has been developed using the highest technological standards and the interaction between them has been perfected. This results in innovations and process optimisations that help the user to master his daily challenges with ease.

The decades of experience and enhancement lead to ideal sanding results in every application. Our production sites in England and Switzerland contribute to the highest levels of quality. This ensures that the required sanding results are achieved, even on demanding surfaces and valuable materials.

Bosch has turned its passion for abrasives into a science, combining the latest technologies with years of experience.

The right formula **for perfect surfaces**

The quality and precision of abrasives are enormously important for the demanding treatment of valuable surfaces. Each element, from the backing through to the grit distribution, is an important part of the perfect abrasive. The right formula, resulting from the interaction between each element, is crucial to achieving the optimal sanding result. The right formula consists of four elements:

1. High-quality backing material

Coordinated backing material for improved adhesion, stretch, tear resistance, flexibility and stability (for example: backing materials containing latex for extremely stable and simultaneously flexible hand sanding paper).

2. Constant distribution of bonding agent

Even, constant distribution of base coat and top size coat thanks to unique measurement and control technology. Softer, more elastic, harder or tougher bonding agents are used depending on the sanding application.

3. The right abrasive grit and constant grit distribution

Constant size, hardness, toughness and shape of grit, optimised for each sanding application. And a controlled scatter process for optimum, consistent grit spacing.

4. Additional coating

Easier extraction of sanding dust from the abrasive.

The first element for perfect surfaces: **Backing material**

Backing material

The backing material gives the abrasive a specific property that you require for desired applications.

Paper, cloth, plastic films, vulcanised fibre, foam and combinations of these are used as the backing for the abrasive.

| Paper (Code) | g/m ² | Application |
|-----------------|--------------------|---|
| A | < 85 | Hand sanding, fine sanding |
| B | 86-110 | Hand sanding, fine sanding |
| C | 111-135 | Hand sanding, portable machine sanding |
| D | 136-220 | Portable machine sanding, machine sanding |
| E | 221-270 | Machine sanding (light wide belt) |
| F | 271-350 | Machine sanding (wide belt) |
| Cloth (Code) | Properties | Application |
| H | Extremely flexible | Fine sanding, profile sanding |
| J | Flexible | Contour sanding |
| X | Rigid/Heavy | High-performance belt sanding |
| Y | Rigid/Extra-heavy | High-performance belt sanding |
| Fibre | | Application |
| Fibre | 0.65/0.80/0.85 | Rotary sanding in metal, stone |

The second element for perfect surfaces: **Bonding agent**

Getting the right balance between grit fixing and flexibility is the greatest challenge when it comes to the bonding agent.

Each product uses a specifically developed binder formula, which has been perfected by our chemists over the course of years. Using this special bonding agent formula enables us to produce very hard and therefore aggressive abrasives as well as extremely flexible products. Bosch uses only solvent-free bonding agent systems.

Base coat

■ Base coat

Top size coat and active abrasive substances

■ Top size coat ■ Active abrasive substances

The base coat is used to prefix the abrasive grains in the required position and distribution on the backing material. Synthetic resins are mainly used as the bonding agent.

The top size coat permanently bonds the abrasive grains to each other and to the backing material. Softer, more elastic or harder, tougher bonding agents, but especially synthetic resins, are used depending on the application of the abrasive. The hardness of the bonding agent affects the aggressiveness and the lifetime of the abrasive.

The third element for perfect surfaces: **Abrasive grit and grit distribution**

The hardness and toughness of the abrasive grains depend on the raw material used and determine the characteristics and application. The abrasive minerals most commonly used are aluminium oxide and silicon carbide in a wide variety of forms. Newer minerals such as zirconia alumina, ceramic aluminium oxide and diamond are also gaining in popularity, while the use of natural minerals like garnet and emery is on a sharp decline. Bosch only uses high-grade abrasive grit to produce its sanding products and follows the FEPA standard as a member of the FEPA organisation.

An innovative process is used to ensure optimal bonding of the carefully selected abrasive grit to the backing material:

Electrostatic coating

- ▶ Electrostatic coating ensures that every single grain is evenly distributed in an upright position on the backing material, so that their longitudinal axis is vertical when they meet the coated backing. Electrostatically coated abrasives are aggressive and achieve greater sanding performance than mechanically coated abrasives.

Closed coating

- ▶ Closed coating – the abrasive grains are distributed densely on the backing material and cover the entire surface. Closed-coat abrasives apply more grain tips at once, their material removal rate is higher and their roughness is lower.

Open coating

- ▶ Open coating – the abrasive grains are distributed with a defined space between them and cover approx. 50–70% of the surface. Open-coat abrasives are less susceptible to clogging and are used for aluminium, soft woods, paints and varnishes.

Laser process

- ▶ An innovative laser process enables controlled application of the top size coat, which ensures a consistent surface structure and a perfect sanding pattern.

Backing material

Base coat

Top size coat

Laser

The fourth element for perfect surfaces: **Additional coating**

Coating with stearate has proven to be effective, particularly when sanding paint, varnish and roughcast. The stearate is distributed evenly over the top size coat due to the unique coating method. This results in the stearate merging the very light varnish dust into lumps which are then, in turn, easier to extract. Stearate also has a cooling effect on varnishes when sanding varnish.

Advantages of stearate coating

- ▶ Prevents clogging
- ▶ Better material removal rate
- ▶ Up to four times longer lifetime than abrasives without special coating

Exceptionally cool cut due to highly active additive coating

The special coating with highly active additives is especially used in the treatment of stainless steel. It reduces temperature development and prevents oxidation on the workpiece surface. The highly active additives on the Bosch Best for Inox abrasives facilitate chip formation and reduce frictional heat, therefore protecting the abrasive grit against wear.

- ▶ Cool cut
- ▶ Virtually no discolouration of workpieces
- ▶ Severe reduction in flying sparks

best  inox

The optimum production for perfect surfaces

High-quality belt joints for an immaculate sanding pattern

The unique and trademarked bonding technology guarantees sanding belts in constantly high quality for brilliant surfaces. The belt conversion and belt joint are extremely important components of the structure of a sanding belt: cut to the required width and length, key both ends for gluing, apply glue to the adhesion points, join together in the exact position and accurately press together with high pressure. They must be coordinated and defined in relation to the application and the respective sanding product. Each belt joint drastically affects the surface quality of all workpieces because the slightest inaccuracies are visible on the workpiece.

Bosch belt joint

Standard belt joint

Joining technology

- ▶ No chatter marks, no impact marks
- ▶ Extremely precise, clean belt run without glue residues
- ▶ Specific application-oriented belt joints
- ▶ High stability and tear resistance for long lifetime

Small damages, grit breakages, irregularities or imprecise belt joints lead to:

- ▶ Chatter marks if the belt joint is excessively thick
- ▶ Losses of quality in the sanding pattern
- ▶ Quicker tearing of the sanding belt
- ▶ Reduction in sanding belt lifetime

Flawless surfaces due to unique die punching process

State-of-the-art production technology ensures cleanly cut edges and precisely punched holes in constantly high quality.

Advantages of Bosch precision punching

- ▶ No losses of quality
- ▶ Clean and virtually burr-free holes
- ▶ No grit breakout

Severe disadvantages of uncleanly punched standard holes

- ▶ Uncleanly cut edges often cause sanding flaws
- ▶ Grit breakout can lead to unwanted scratches on the surface
- ▶ Poorly punched holes can reduce the extraction performance

Perfect surface structure thanks to special flexing

The abrasives are treated in a linear online multiflex process to prevent random grit breakout during sanding caused by the constantly changing compression and bending stresses.

This makes the abrasives very flexible. This is a product characteristic particularly indispensable in hand sanding sheets and rolls.

Advantages of a flexed abrasive are considerable

- ▶ Flexible and handy
- ▶ Easy to tear, cut or fold to the required size
- ▶ No grit and coating breakout

Considerable disadvantages of abrasives without flexing

- ▶ Flaws, scratches and surface damage in the surface structure
- ▶ Non-elastic
- ▶ The abrasive breaks

Which machine needs which sanding sheet?

Recommendation for correct storage of abrasives:

- Temperature: 15 to 25 °C
- Relative humidity: 40-70%
- Store in original packaging
- Never on concrete floors
- Never by an open window
- Never near to a radiator

Sanding sheets

for random orbit sanders

- ▶ Robust sanding sheets in versions C470 Best for Wood and Paint, C430 Expert for Wood and Paint, F355 Best for Coatings and Composites
- ▶ For working on paint, varnish, wood, hard materials such as glass, stone and car paint, and metals
- ▶ With Velcro-type fastening for rapid sheet changes and extraction holes for internal dust extraction
- ▶ Sanding sheets for machines of all conventional brands and diameters

The optimum sanding sheet for every material

C470 sanding sheets for random orbit sanders, Best for Wood and Paint, 115 mm diameter, 8 holes

best **Wood+Paint**

- ▶ **Suitable for** sanding wood, paint, varnish, roughcast
- ▶ With calcium stearate coating that reduces premature clogging
- ▶ **Appropriate for** random orbit sanders from Bosch, Einhell, Kress, Peugeot, Skil, Stayer

Accessories for Bosch random orbit sanders

- ▶ Sanding pads as extension or as replacement pad for random orbit sanders
- ▶ Pagoda-shaped pad edge geometry leads to lower rigidity in the edge zones and improved sanding properties for curves and edges
- ▶ Improved polished finish on surfaces due to more adaptable foam quality

Sanding pads for Bosch random orbit sanders

- ▶ **Hard sanding pads** (blue) for rough sanding with high material removal rate and lower surface quality
- ▶ For sanding paint, filler, plaster and untreated natural woods on even surfaces
- ▶ High edge firmness – ideal for narrow edges
- ▶ **Medium-hard sanding pads** (black) for standard to rough sanding
- ▶ **Soft sanding pads** (grey) for standard sanding tasks
- ▶ Good material removal and good surface quality – universal applications
- ▶ **Extra-soft sanding pads** (grey) for fine sanding tasks and sanding on radii and shaped parts
- ▶ Highest surface quality with low material removal. For intermediate and final polishing at carpentry, paint, fitted kitchen, Corian workshops

Fibre sanding discs

for angle grinders

The new Best for Inox & Best for Metal ceramic fibre sanding discs

Uncompromising, fast results thanks to ceramic aluminium oxide

- ▶ Self-sharpening ceramic grit achieves excellent removal rates
- ▶ Very fast work progress
- ▶ High level of aggressiveness
- ▶ Longest lifetime
- ▶ Highly active additive coating in 2nd size coat for Best for Inox products

Fibre sanding discs, R784, Best for Inox - EN 13743

best for Inox

- ▶ Particularly suitable for working on stainless steel (inox)
- ▶ Grinding off welded seams, grinding of surfaces, deburring and edge chamfering, general dressing work
- ▶ Fibre sanding disc with ceramic aluminium oxide/semi-friable aluminium oxide, fully synthetic resin bonded, 0.65 or 0.80 mm vulcanised fibre and highly active additive coating
- ▶ The highest material removal rate and longest lifetime thanks to self-sharpening ceramic grit
- ▶ Cool cut with hardly any discolourations on the workpieces, and severe reduction in flying sparks
- ▶ Sanding discs for clamping on a rubber backing pad

Flap discs

for angle grinders

The new Best for Metal ceramic flap discs

Uncompromising, fast results thanks to ceramic aluminium oxide

- ▶ Self-sharpening ceramic grit achieves excellent removal rates
- ▶ Very fast work progress
- ▶ High level of aggressiveness
- ▶ Longest lifetime

X781 flap discs, Best for Metal, straight version - EN 13743

best Metal

- ▶ Especially suitable for treatment of stainless steel, steel, cast iron and sheet steel
- ▶ Powerful thanks to ceramic aluminium oxide, fully synthetic resin bonded, sturdy X-cloth
- ▶ The highest material removal rate and longest lifetime thanks to self-sharpening ceramic grit
- ▶ Flap disc on carrier plate made of glass fibre
- ▶ Straight version - for surface sanding and working on welded seams at a work angle of 5-15°

X781 flap discs, Best for Metal, angled version - EN 13743

best  Metal

- ▶ Especially suitable for treatment of stainless steel, steel, cast iron and sheet steel
- ▶ Powerful thanks to ceramic aluminium oxide, semi-friable aluminium oxide, fully synthetic resin bonded, sturdy X-cloth
- ▶ The highest material removal rate and longest lifetime thanks to self-sharpening ceramic grit
- ▶ Flap disc on carrier plate made of glass fibre
- ▶ Angled version - for working on edges/welded seams and surface sanding at a work angle of 15-25°

X551 flap discs, Expert for Metal, angled version - EN 13743

expert for Metal

- ▶ Particularly suitable for metalworking
- ▶ Powerful thanks to zirconia/semi-friable aluminium oxide, fully synthetic resin bonded, sturdy X-cloth
- ▶ The low-cost alternative as an ideal solution
- ▶ Flap disc on carrier plate made of glass fibre
- ▶ Angled version - for working on edges/welded seams and surface sanding at a work angle of 15-25°

Fleece discs for angle grinders

The N377 Best for Metal cleaning disc

No clogging thanks to open structure.

The advantages of the N377 Best for Metal coarse cleaning disc:

- ▶ Long lifetime
- ▶ No smearing
- ▶ Cost saving in comparison to conventional acid paste methods
- ▶ No clogging thanks to open structure
- ▶ Adaptable to contours

Cleaning disc, N377, Best for Metal, 50m/s

best  Metal

- ▶ **Suitable for** working on metal, non-ferrous metals and stainless steel
- ▶ Ideal for removing rust, paint, oxide layers, lime deposits, moss and graffiti on stone, marble and concrete, seal residues
- ▶ Low clogging thanks to open structure of the fleece. Coating made of silicon carbide
- ▶ Cleaning disc on carrier plate made of glass fibre
- ▶ **Appropriate for** controllable angle grinders with a max. speed of 7,600 rpm using discs with 125 mm diameter and with max. 8,300 rpm using discs with 115 mm diameter, e.g. Bosch GWS 14-125 Inox Professional angle grinder

The N477 Best for Inox SCM fleece disc

No clogging thanks to open structure.

The advantages of the N477 Best for Inox SCM fleece disc*:

- ▶ Unique combination of aggressiveness, finish and long life
- ▶ Consistent, perfect finish
- ▶ No smearing

*SCM= Surface Conditioning Material
(retains the surface structure)

No clogging thanks to open structure.
Adaptable to contours.

SCM fleece disc, N477, Best for Inox, 50 m/s

best 

- ▶ Surface Conditioning Material (SCM) for the finish
- ▶ **Suitable for** working on steel, non-ferrous metals, stainless steel (inox)
- ▶ Ideal for deburring, working on welded points, refining grind lines, preparing for surface finishing
- ▶ Fleece discs on cloth backing for clamping on rubber backing pads; coating made of aluminium oxide
- ▶ Extra coarse - brown, coarse - light brown, medium - red
- ▶ **Appropriate for** controllable angle grinders with a max. speed of 7,600 rpm using discs with 125 mm diameter and with max. 8,300 rpm using discs with 115 mm diameter, e.g. Bosch GWS 14-125 Inox Professional angle grinder

Cutting, Grinding and Brushing

Grinding and cutting discs

for angle grinders

Bosch grinding and cutting discs last longer and enable fast, energy-saving work. Safety plays a very important role here: Bosch grinding and cutting discs comply with international standards and safety requirements such as **EN 12413, FEPA and oSa**. The careful selection and combination of high-quality raw materials pays for itself. Tests show: a small price advantage achieved by using raw materials of lower quality frequently reduces the performance or lifetime by half.

Bosch grinding discs allow for excellent work results when used properly (e.g. at the correct angle). They can be used to quickly grind down welded seams.

Bosch cutting discs offer long life and fast work. They can be used for cutting work-pieces made of metal, stone and stainless steel.

For efficient working and top results:

The performance classes of the bonded abrasives range

Perfect for cutting and grinding – the masters in inox and metal

Workpieces made of high-quality materials such as stainless steel and hardened steel require especially careful treatment. Until now, cutting discs had to be changed frequently due to a high rate of wear. The new Best for Inox and Metal cutting and grinding

discs from Bosch provide a remedy for this. High-temperature-treated or ceramic encapsulated abrasive grits with high grain strength are used depending on the type of disc.

best for Inox

Cutting discs
with 115 mm–230 mm diameter

Grinding discs
with 115 mm + 125 mm diameter

best for Metal

Cutting discs
with 115 mm–230 mm diameter

Grinding discs
with 115 mm–230 mm diameter

Better in every layer – Quality for professionals

The abrasive grains are integrated into a modern phenol resin bond matrix, which is especially temperature and abrasion resistant due to the addition of functional fillers and additives.

This results in a **high material removal rate and constantly high work quality and safety.**

Especially long lifetime of the Best for Inox cutting disc

Lifetime of a cutting disc: cut workpiece area divided by the consumption area of the disc (mm²/mm²) = G.
The higher the G value, the longer the lifetime of the disc.

Tests by Bosch in 10×30 mm inox, with 230×2.5 mm Best for Inox cutting disc, with 2600 watt angle grinder.

Which Bosch bonded abrasive is suitable for which application

Grinding discs (metal and inox)

| Application ranges | Metal | Inox |
|--|-------|------|
| Aluminium alloy | ○ | ○ |
| Brass, bronze | ○ | ○ |

| Slate | ● |
| Terrazzo | ● |
| Tiles | ● |

● suitable ○ relatively suitable

Safety instructions for cutting and grinding discs

These safety recommendations should be observed by all users, in the interest of their own safety.

Use only tools that comply with the highest safety standards. These tools comply with European standard EN 12413 on safety requirements for abrasives.

Important! The handling of high-speed abrasive tools requires extreme care!

On the abrasive tool or on the package you will find different symbols that are intended to remind you of the most important dangers. Observe these for your own safety.

The symbols have the following meanings:

Observe safety recommendations and safety instructions of the machine manufacturer

Wear safety goggles or glasses to protect the eyes

Use ear protection

Wear a dust mask

Wear safety gloves

Do not use if damaged

Do not use for side grinding – the abrasive tool must not be subjected to lateral loads!

- Use abrasive tools only with such machines expressly specified by the manufacturer in his manual for use with cutting-off wheels and grinding discs, or with cup grinding wheels.
- Never use abrasive tools beyond the indicated expiration date!
- The expiration date, which shows the month and year, can be found on the metal ring in the centre of the disc.
- Always store abrasive tools in a dry location at room temperature; use the oldest tools first.
- Prior to use, check the abrasive tool for possible damage.
- Important: Do not use damaged abrasives!
- Disconnect the machine from the power supply before changing the abrasive tool.
- Observe the max. RPMs specified on the abrasive tools. Your machine must never exceed the max. RPM of that shown on the wheel/disc!
- Make sure that the abrasive tool is mounted correctly. Ensure the diameter of the disc bore hole matches the diameter of the mount on your machine.

- Always wear suitable protective clothing.
- Both clamping flanges must be of equal diameters. Do not use wheel flanges of different diameters.
- Use only machines fitted with a safety guard and handle. The guard should be adjusted to offer the operator maximum protection.
- Never use cutting-off wheels for grinding, unless this is expressly allowed by a pictogram ("Cut + Grind").
- When grinding with cup grinding wheels, a grinding machine with an adjustable safety guard must be used. To minimise the exposure, adjust the safety guard prior to use so that the outer surface is completely covered and the wear of the cup grinding wheel is compensated.
- Perform only abrasive tasks that are expressly suitable for cutting-off wheels and grinding discs. Observe all limitations of use, safety instructions or other information that are available to you.
- Never twist or turn a cutting-off wheel whilst in a cut.
- Ensure the workpiece is securely clamped before attempting a cut.
- Ensure the waste material falls away from the cut, it is imperative the waste does not jam the wheel.
- Avoid striking the surface of the workpiece with the abrasive tool.
- Do not set down the machine until it has completely stopped.
- Never start or stop the abrasive tool whilst in contact with the workpiece.
- Work in a stable secure position allowing you to take full control of the machine whilst working.
- Avoid excessive tool pressure.
- During all abrasive applications, always provide sufficient ventilation and protective measures corresponding to the material being processed.
- All dry abrasive operations should be carried out in a location with suitable dust extraction systems.
- Never make any modifications to the products.

No more disc changes!

Cutting, grinding and finishing with only one disc

The advantages of the 3-in-1 disc speak for themselves:

- ▶ The right disc is always ready to hand, without the need for disc changes.
- ▶ Efficient working due to time and cost saving.
- ▶ Easy cutting of profiles, pipes and sheets made of metal and inox.
- ▶ Safe grinding with a 2.5 mm thin disc, ideal for hard-to-reach areas.
- ▶ Less heat discolourations when grinding.

Application and angle effect

Cutting

Easy, fast and exact cutting.

Grinding

Clean grinding with fine results. Ideal for light grinding work.

Finishing

Fine finish. The fine grit produces a cleaner result than with commercially available grinding discs.

Maximum work safety thanks to the optimum three-layer reinforcement of the disc.
Manufactured in accordance with OSA guideline. Meets EN 12413.

3-in-1 discs

- ▶ Cutting, grinding and finishing with one disc
- ▶ **Suitable for** metal and inox
- ▶ **Appropriate for** hand-held angle grinders
- ▶ Maximum circumferential speed: 80 m/s (depending on rpm and disc diameter)
- ▶ Fe/S/Cl < 0.1%

Rapido Multi Construction cutting discs

Rapido MultiConstruction

- ▶ **Appropriate for** hand-held angle grinders
- ▶ Maximum circumferential speed: 80 m/s (depending on rpm and disc diameter)
- ▶ Fe/S/Cl < 0.1%
- ▶ The thin Rapido disc offers many advantages: fast and clean cutting with little exertion of force, very accurate, less noise and dust, and no blue discolouration or burr formation

Vibration Control grinding discs:

Less vibration and less noise

Vibration and noise always occur during grinding work. Vibration is noticeably reduced with the new semi-flexible Vibration Control grinding discs. This optimises the work result and makes work user-friendly.

Less noise when grinding

Thanks to its flexibility, the disc adapts well to the surface of the material being worked on.

Cool grinding, improved chip removal and less discolouration of the surfaces: the special waffle design makes it possible.

Maximum work safety thanks to the optimum three-layer reinforcement of the disc.
Manufactured in accordance with OSA guideline. Meets EN 12413.

Semi-flexible grinding discs – Vibration Control

- ▶ For light grinding work. Thanks to the flexibility of the disc, it is ideally suited to working on curved surfaces. Other advantages of the disc: less vibration and noise development, cool grinding (less heat discolouration). No backing pad required.
- ▶ **Suitable for** use in inox, metal and aluminium.
- ▶ Fe/S/Cl < 0.1%

Accessories for GWS 14,4 V Professional cordless angle grinder

- ▶ Specially optimised accessories for GWS 14,4 V Professional cordless angle grinder
- ▶ For ideal cutting performance and lifetime

Velcro-type fastening plate ideal for sanding work on painted surfaces

SDS-pro system for changing discs in seconds

Cutting discs for GWS 14,4 V Professional

- ▶ Appropriate for GWS 14,4 V Professional cordless angle grinder with SDS-pro fitting
- ▶ Maximum circumferential speed: 80 m/s (depending on rpm and disc diameter)

Tungsten carbide grinding heads for angle grinders

- ▶ Carbide-coated grinding heads for a wide range of applications
- ▶ **Suitable for** removing formwork protrusions on exposed concrete, residual concrete on formwork boards, adhesive residues on tiles, glass fibre plastic residues or thick layers of paint, machining limestone and curves on marble, cleaning small areas of protective coatings, shaping aerated concrete, hoof care for hooved animals

Ideal for straightening or grinding glass fibre plastics

- ▶ Different grit layers – coarse, medium, fine – for perfectly coordinated working
- ▶ All Bosch carbide grinding heads are individually balanced

Ideal for smoothing formwork residues

Tungsten carbide grinding heads for angle grinders

- ▶ **Suitable for** working in glass fibre plastics, aerated concrete, soft and hard wood, paints, varnishes, filler, rubber, cork, leather, plastics, sandstone, limestone
- ▶ For hand-held angle grinders at maximum circumferential speed of 80 m/s (depending on rpm and disc diameter)
- ▶ **Note:** Dust-free working with tool-free fitting Bosch extraction guard 2 605 510 107

* only for non-ferrous metals, not for aluminium and inox

Solutions for all applications

Appropriate for angle grinders and drills

Coordinated product properties
for optimum results on all materials:

Knotted and crimped wire
The optimum solution for light and heavy duty applications

Six wire thicknesses
for six different levels of aggression

Please note: The permitted speed of the accessory must be at least as high as the maximum speed stated on the power tool. Accessories that turn faster than permitted can be destroyed.

Wire brushes for angle grinders

with M10 / M14 thread

Steel brushes

| Diameter mm | Wire thickness mm | Max. speed rpm | Thread M | For angle grinders (mm) diameter, min. | Part number | Packaging type | Pack quantity | Minimum order quantity | Barcode |

clean Metal

Wire cup brush – crimped wire

Suitable for light to medium duty cleaning work on medium to large metal surfaces, such as removing coatings, removing rust, cleaning formwork boards and facings, roughing, matt sanding, paint stripping.

Appropriate for all angle grinders with M14 thread and GGS 6 S Professional

| | | | | | | | | | |
|-----|-----|--------|----|-----|----------------------|-----|---|---|--------|
| 70 | 0.3 | 12,500 | 14 | 125 | 2 608 622 098 | C1a | 1 | 1 | 631785 |

heavy Metal

Wire wheel – knotted wire

Ideal for cleaning welded seams.

Suitable for heavy duty cleaning work at high circumferential speeds on smaller metal surfaces, in grooves or on edges, such as removing heavy rust, paint stripping, deslagging, deburring, descaling.

Appropriate for all angle grinders with M14 thread and GGS 6 S Professional

| | | | | | | | | | |
|-----|-----|--------|----|---|----------------------|-----|---|---|--------|

heavy Metal

Tapered brush – knotted wire

Ideal for working on hard-to-reach areas (due to the conical shape of the brush).

Suitable for heavy duty cleaning work at high circumferential speeds on smaller metal surfaces, in grooves or on edges, such as removing heavy rust, paint stripping, deslagging, deburring, descaling, cleaning welded seams.

Appropriate for all angle grinders with M14 thread and GGS 6 S Professional

Brass brushes

Wire cup brush - crimped wire, brass-coated

Suitable for light to medium duty cleaning work on medium to large metal and non-ferrous metal surfaces, such as removing coatings, removing rust, cleaning formwork boards and facings, roughing, matt sanding, paint stripping.

Appropriate for angle grinders with M10 or M14 thread and GGS 6 S Professional

Advantage: corrosion protection provided by brass-coated wire.

| | | | | | | | | | |
|-----------|-----|--------|----|-----|----------------------|-----|---|---|--------|
| 70 | 0.3 | 12,500 | 14 | 115 | 1 608 614 020 | C1a | 1 | 1 | 003131 |

Pencil brush – knotted wire

Ideal for working on very hard-to-reach areas on stainless steel.

Suitable for medium duty cleaning work in corners and working on the inside of pipes and profiles made of stainless steel, aluminium or non-ferrous metals, such as removing heavy rust, removing paint or varnish.

Pencil brush – crimped wire

Ideal for working on very hard-to-reach areas on stainless steel.

Suitable for light duty cleaning work in corners and working on the inside of pipes and profiles made of stainless steel, aluminium or non-ferrous metals, such as removing rust, roughing, matt sanding, paint stripping.

Wire cup brush – crimped wire, brass-coated

Suitable for light to medium duty cleaning work on small to medium metal and non-ferrous metal surfaces, such as removing coatings, removing rust, cleaning formwork boards and facings, roughing, matt sanding, paint stripping, working on wood.

Advantage: corrosion protection provided by brass-coated wire.

Wire wheel – crimped wire, brass-coated

Ideal for removing annealing colour on welded seams.

Suitable for light to medium duty cleaning work on small surfaces, in grooves or on edges on metal or non-ferrous metal, such as removing rust, roughing, matt sanding, paint stripping, working on wood.

Advantage: corrosion protection provided by brass-coated wire.

Nylon bristle with aluminium oxide

| Diameter mm | Wire thickness mm | Max. speed rpm | Brush width mm | Part number | Packaging type | Pack quantity | Minimum order quantity | Barcode |
|--------------------|-------------------|----------------|----------------|----------------------|----------------|---------------|------------------------|---------|
| Product properties | | | | Ordering information | | | | |

Wire cup brush – Nylon bristle with aluminium oxide coated abrasive K80

Suitable for paint stripping, removing rust, smoothing, matt sanding and cleaning wood, metal and PVC on smaller to medium surfaces, texturing wood.

Adapts perfectly to the contours of the workpiece, without severely altering the surface.

Works at constant material removal rate because abrasive grains are continuously released.

Grinding stones

for straight grinders and drills

- ▶ Highest quality of grinding grit, bonding material and backing material
- ▶ Tools for safe and efficient grinding and deburring with straight grinders and drills

Best work results with Bosch grinding stones when deburring non-hardened or hardened steel

Grinding stones – Aluminium oxide, for straight grinders and drills

- ▶ Appropriate for all straight grinders with collets and for drills
- ▶ for non-hardened and hardened steel
- ▶ Shapes of stones: round (a), half-round (b), cylindrical (c), disc-shaped (d), tapered (e)

The Bosch ordering and packaging control system

The ordering and packaging control system makes it easier to order the right amount and find the packaging type at a glance.

Order quantities are rounded up to the minimum order quantity.

$$2 \times \begin{array}{|c|}\hline \text{:} \\ \hline \end{array} = \cancel{\begin{array}{|c|}\hline \text{:} \\ \hline \end{array}} = \begin{array}{|c|c|c|}\hline \text{:} & \text{:} & \text{:} \\ \hline \end{array}$$

Order quantity PQ

MOQ

Order quantities must be a multiple of the minimum order quantity:

3, 6, 9 ...

$$6 \times \begin{array}{|c|}\hline \text{:} \\ \hline \end{array} = \begin{array}{|c|c|c|}\hline \text{:} & \text{:} & \text{:} \\ \hline \end{array} \begin{array}{|c|c|c|}\hline \text{:} & \text{:} & \text{:} \\ \hline \end{array}$$

Order quantity PQ MOQ MOQ

Example:

Step 1: The packaging type for each part number can be found on the product pages:

| Ordering information | Part number | Packaging type | Pack quantity | Minimum order quantity* | Barcode |
|----------------------|---------------|----------------|---------------|-------------------------|---------|
| | 2 608 585 780 | P1p | 1 | 1 | 511421 |
| | 2 608 585 781 | P1p | 1 | 1 | 511438 |

Step 2: An illustration of the corresponding packaging type and specifications about the type of suspension and form of the packaging can be found on the back cover.

P1p Watchbox with Euro hole

P2p Watchbox with other type of suspension

Step 3: What is the structure of a packaging type code?

1 ————— C1a ————— 2
————— 3

1. There are six different material groups which are identified by the initial letter in the English packaging code:

Packaging made of paper, cardboard or corrugated board (**Cardboard**)
 Plastic packaging (**Plastic**)
 Combined plastic / cardboard packaging (**Plastic and Cardboard**)
 Metal packaging (**Metal**)
 Unpacked product (**Unpacked**)
 Wood packaging (**Wood**)

2. Each packaging has one of three different types of suspension:

0 without any type of suspension
 1 with Euro hole
 2 other type of suspension

3. In the six material groups, each form of packaging is identified by a lower case letter:

| | | | |
|---|------------------------|-------------------------|----------------------|
| C Packaging made of paper, cardboard or corrugated board | a Box | d Sleeve | h Tube |
| | b Folded carton | e Hanger | k Carton with sleeve |
| | c Pocket | f Paper bag | |
| P Plastic packaging | a Box | e Hanger | n Sleeve |
| | b Bag | f Shrink-wrapped | p Watchbox |
| | c Pouch | h Tube | |
| | d Bag with tab card | k Cassette | |
| PC Combined plastic/cardboard packaging | a Blister | c Shrink-wrapped carton | |
| | b Folding blister | d Tight Pack | |
| M Metal packaging | a Cassette | b Aerosol | |
| U Unpacked product | No form specifications | | |
| W Wood packaging | a Case | | |

Packaging

that holds clear information

Packaging made of paper, cardboard or corrugated board (**Cardboard**)

C0a Box without any type of suspension

C1a Box with Euro hole

C2a Box with other type of suspension

C1b Folded carton with Euro hole

C1c Pocket with Euro hole

C1d Sleeve with Euro hole

C1e Hanger with Euro hole

C0f Paper bag without any type of suspension

C0h Tube without any type of suspension

C2h Tube with other type of suspension

C1k Carton with sleeve and Euro hole

Plastic packaging (Plastic)

P0a Box without any type of suspension

P1a Box with Euro hole

P0b Bag without any type of suspension

P1b Bag with Euro hole

P1c Pouch with Euro hole

P2c Pouch with other type of suspension

P1d Bag with tab card and Euro hole

P1e Hanger with Euro hole

P2e Hanger with other type of suspension

P0f Shrink-wrapped without any type of suspension

P1f Shrink-wrapped with Euro hole

P0h Tube without any type of suspension

P1h Tube with Euro hole

P1k Cassette with Euro hole

P0n Sleeve without any type of suspension

P1p Watchbox with Euro hole

P2p Watchbox with other type of suspension

Combined plastic / cardboard packaging (Plastic and Cardboard)

PC1a Blister with Euro hole

PC1b Folding blister with Euro hole

PC1c Shrink-wrapped carton with Euro hole

PC1d Tight Pack with Euro hole

Metal packaging (Metal)

M1a Cassette with Euro hole

M0b Aerosol without any type of suspension

Unpacked product (Unpacked)

U0 Without any type of suspension

Wood packaging (Wood)

W0a Case without any type of suspension
