

GEWISS

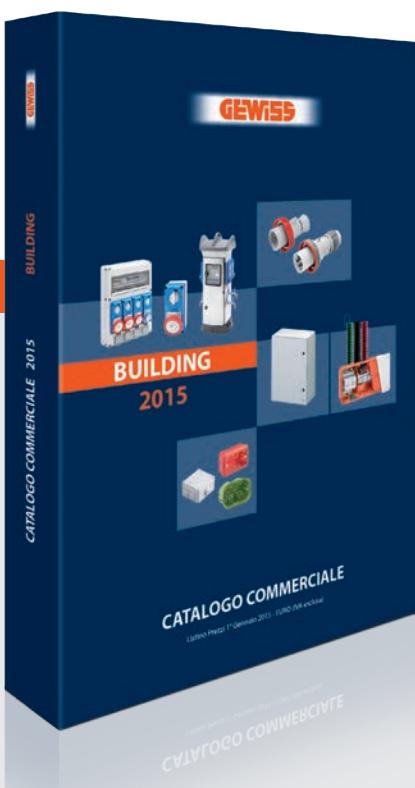

BUILDING 2015

**DISTRIBUTION AND
CONNECTION SYSTEMS**

GEWISS GROUP

GEWISS is an international leader in the production of systems and components for low voltage electrical installations. The fact that development is seen as a constant management feature has permitted GEWISS to assert itself as a reference interlocutor for the electrotechnical market in the creation of solutions for domotics, energy and the lighting industry. It is now present in Italy, France, Germany, the United Kingdom, Spain, Portugal, China, Russia, Turkey, Romania, Chile, the United Arab Emirates, and in a further 80 countries around the world.

Building

Junction boxes and special containers, a complete and coordinated line of distribution boards, cutting-edge industrial connections and an integrated system of boards for special systems create the GEWISS distribution systems.

Domotics

The domotic systems offer cutting-edge solutions for smart home and building management and control, guaranteeing safety, comfort and energy savings along with Italian design.

Power

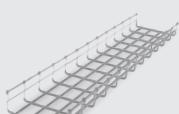

The technologically advanced range of modular and moulded-case devices joins the vast range of distribution boards and cabinets, enclosures and combined boards to create the Gewiss Protection System.

Lighting

Lighting systems designed for every room, area and location. Solutions that embrace LED technology to meet the requirements of industrial and commercial sector contexts, sport facilities and emergency lighting.

GEWISS distribution and connection systems

Gewiss offers a complete industrial power distribution and supply system to meet every need. Construction sites distribution systems (68 Q-BOX/Q-DIN range), energy and service distribution terminal system (68 Q-MC range) and distribution boards (68 Q-DIN range) combined with plugs and socket-outlets (IEC 309 range) or interlocked socket-outlet systems (IB range). The IEC 309 range has been totally renewed with the innovative IEC 309 HP (HIGH PERFORMANCE) socket-outlets and plugs, straight and 10° flush-mounting socket-outlets and plugs, from 16 to 125A.

Connection systems

GEWISS, market leader in the junction boxes and enclosures sectors, provides also a complete, co-ordinated range of surface and flush-mounting distribution enclosures and boards. GEWISS conduits, accessories and cable trays are able to connect all the elements of the Integrated Electrical System.

Plugs and socket-outlets to IEC 309 Standards

IEC 309 HP: a byword for perfection

IEC 309 HP - HIGH PERFORMANCE is a complete range of mobile plugs and mobile and flush-mounting socket-outlets for currents from 16A to 125A with an IP44/IP54 degree of protection (and up to IP66/IP67/IP68/IP69). The product is at the top of its segment in terms of reliability, practicality, performance and technical characteristics when it comes

to industrial connections. All the products of the range are distinguished by their coordinated, modern, practical design that makes them instantly recognisable and adds extra value to the entire GEWISS system of industrial connections. Total protection, mechanical robustness, ergonomics: the IEC 309 HP range is a byword for perfection.

Total protection

GEWISS is the world's first manufacturer to offer "total" protection against the infiltration of solid bodies and/or liquids. Apart from the IP66/IP67 degrees of protection in fact, the IEC 309 HP straight plugs and sockets also have two extra degrees of protection - IP68 and IP69.

Safe and robust

The materials and considerable thickness guarantee excellent resistance to mechanical stress (IK09), even at low temperatures (down to -25°C). The range offers performance levels that are decidedly superior to both the regulation standards and market standards.

Practical, functional and ergonomic

Its ergonomics and technical details make the new range unique: the technical solutions are designed to facilitate and speed up the installation phase whilst still ensuring GEWISS' renowned attention to quality and safety.

The innovative aspects of the new IEC 309 HP range

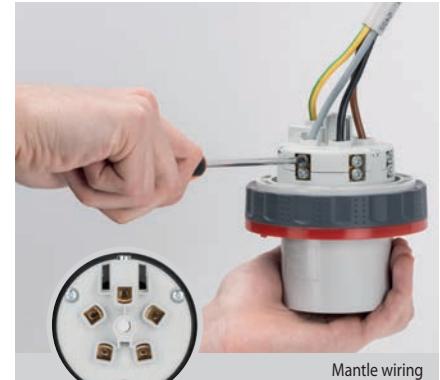

IEC 309 HP 63-125A

Rubber protection

Enlarged cable clamp

Mantle wiring

Maximum impact resistance

The structural design uses inserts in **overprinted rubber** to protect the parts particularly subject to impact, and employs top quality technopolymers. The body-grip closure system has stainless steel screws and brass inserts embedded in the body. This guarantees greater impact resistance, even when the product is used in heavy-duty conditions.

Easy, accurate wire tightening

The cable fastener gland, with radial precision tightening, offers the **widest selection of diameters** available on the market. Thanks to the sizing of the cable relief, the shape, and the overprinted rubber parts of the ring nut, it's extremely easy to tighten the wire, even by hand. The back part of the ring nut also has a large, firm area for carrying out opening and closing operations with tools.

Safe connection

The connection of the wire using screw terminals with indirect tightening ensures the highest possible level of safety, guaranteeing the best contact surface and pressure even with non-terminated wires. The nickel-coating on the plug pins and holes, and the "**HIGH QUALITY CONTACT**" hole-plug pin connection, offer the maximum reliability of the electrical connection.

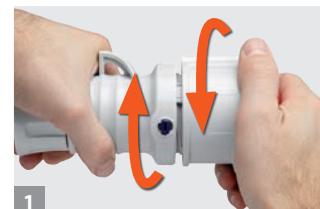

IEC 309 HP 16-32A

Fast wiring

Screw wiring

4

SAFE-LOCK system

Connection speed, simplicity and safety

The technical and functional aspects of the fast-wiring versions reduce the connection times (compared with traditional versions) by half. This solution uses levers that are easy to open and close, and they're coloured to ensure the polarities can be immediately identified. In the screw wiring versions, all the screws face in the same direction and are completely loosened.

Fast, safe closure in every situation

SAFE-LOCK is the new body-grip closure system based on $\frac{1}{4}$ turn coupling and anti-slackening friction. The $\frac{1}{4}$ turn safety screw shows clearly whether the system is open or closed, and it can be used time and time again.

Important: the range of multipliers, adapters and shunts should be considered an integral part of the system, as they are only suitable for mobile and temporary installations and connections (not for permanent applications). Furthermore, the range cannot be used in areas with an increased fire hazard.

Innovative protection for interlocked switched socket-outlets

This innovation, patented by GEWISS and introduced on Automatika via the MCB protection on the front, revolutionises the protection system for interlocked switched socket-outlets from 16 to 32A. The MCB inside the socket-outlet reduces the space needed on the distribution boards and can be reset via the external knob while the signalling LEDs show its status.

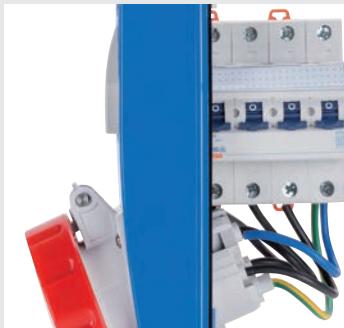

The 67IB range of interlocked switched socket-outlets also includes versions with protection (via fuses) and with a rotary switch (without fuses). The entire range is made from high-performance materials with an IP67 degree of protection to guarantee energy distribution in commercial and industrial contexts (16, 32 and 63A).

The IB range also has an interlocked COMBIBLOC version with more compact dimensions, a horizontal 44IB version, and a 66IB version for heavy-duty use.

Top quality materials

Made of high-performance blue thermoplastic materials guaranteeing good long-term resistance to impact, UV rays and chemical agents.

Integrated protection

MCB integrated on the front of the interlocked switched socket-outlet, C characteristic 6kA, and signalling LEDs showing the operating status for each phase.

Fuses protection

The system has a front fuse-holder base, allowing all the fuses to be disconnected and removed. It also simplifies access and checking or maintenance operations.

The codes with the suffix "N" refer to the products of the new range of IP67 vertical interlocked switched socket-outlets, and correspond to the product codes of the previous range without the letter "N" (apart from the Automatika version); they can therefore be installed on the Q-DIN boards of the old SBF versions, allowing any replacement or modification even on boards already installed.

Using the GW 66 715 N adapters for 16-32A versions, and GW 66 716 N for 63A versions, they can also be installed on the Q-DIN boards or modular bases of the old CBF IP55 versions.

68 Q-DIN range

Distribution boards

The industrial boards system for energy distribution

The 68 Q-DIN range is used in commercial and industrial contexts, and on construction sites.

They are the most compact models available on the market and come in both wired and unwired versions, in compliance with the IEC 61439 Standard.

Versions with 5, 10, 14 and 20 DIN modules (EN 50022), with an extra 14 or 20 modules available (up to a total of 40) to create more DIN space. IP65 protection degree guaranteed also by the innovative handle closure of the door.

For flush-mounting and interlocked socket-outlets from 16 to 63A, IP44 and IP67, SYSTEM range domestic socket-outlets.

Available also versions to fix domestic sockets (German or French standard) dimensions 50x50 mm.

A wide range of accessories such as pole couplings, wall brackets, transportation handles and mobile supports complete the range and satisfy any requirement.

Up to 63A

The 20-module versions support the IEC 309 socket-outlets with or without interlock, up to 63A, without requiring boards of different sizes.

More DIN space

The internal space of the boards means they can house up to 20 DIN modules. With the additional module, you can even have up to 40 modules.

Emergency push-button

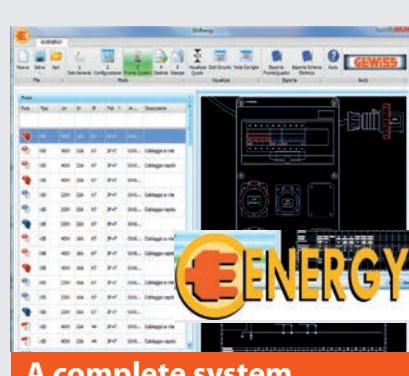

On versions with 10, 14 and 20 modules, an emergency push-button can be fitted on the top, where it is clearly recognisable and accessible.

A complete and flexible system for each construction site

A system of wired or unwired distribution boards, certified in accordance with IEC EN 61439-4, with different combinations of socket-outlets and circuit breakers for energy distribution on small and large construction sites.

The 68 Q-BOX has an high impact and UV rays resistance, additional panels to increase the functions, with supplementary interlocked switched socket-outlets (up to 12 per board) and modular protection circuit breakers (up to 160A), circuit protection by modular and moulded-case switches up to 60 DIN modules - EN 50022.

The construction site system also includes the 46QP distribution boards and the 68 Q-DIN and 68 QMC mobile terminals (customised and wired versions), certified by Customer Service with GWEnergy software.

A complete system

GEWISS offers a wide range of wired versions that are ready for use, and unwired versions that can be personalised to suit the specific construction site requirements.

Up to 12 socket-outlets

The use of the special panels extends the number of possible configurations, offering up to 12 compact interlocked switched socket-outlets in a single board.

Up to 60 modules

Thanks to the panel with a 12-module DIN rail, up to 60 DIN modules can be installed, along with circuit breakers of up to 160A.

68 Q-MC range

Energy and service distribution pedestals

Design and safety for all needs

The elegant style, materials and colours ensure 100% integration with the surroundings.

The attention to the highest quality and safety standards - with the relative certifications - means reliability and safety.

The 68 Q-MC pedestals are the right solution for the distribution of electricity, water, services in harbours, campsites, urban areas, and industrial contexts.

Three product families (stainless steel terminals or compact, high-capacity thermoplastic models) in 6 different sizes, with socket-outlets complying with Standard IEC309 (16-125A), or with terminal block output or industrial socket-outlets up to 400A. The terminals can also be equipped with an electronic system for controlling and recording consumption levels. To complete the range, there are even fire-prevention versions.

Rotary switches for control and emergency applications

Rotary switches for command (with black knob) and emergency (with red knob), in two different application types - surface-mounting and for board.

The surface-mounting box versions have an insulating case (from 16A to 63A) or a metal case (from 16A to 160A), with 8 different amperages and poles.

The board versions are subdivided into those with emergency door release, and those for DIN rail assembly, from 16A to 63A.

Main features:

- Both the command and emergency versions can be locked.
- Extension bracket to adjust the depth of the switch according to the type of board.
- Combined coupling via watertight connectors.
- ATEX solutions in a metal box, for both command and emergency.

Industrial connections for power, control and signalling circuits

Almost 2000 codes for multipolar connection system from 3 to 216 poles. Four different types of connection: screw, crimp, screw terminal block and spring, in 11 different sizes. 12 ranges of inserts:

- GW-A compact range**
- GW-D/DD high density contacts**
- GW-E/EE/ES industrial connectors**
- GW-EAV terminal block connectors**
- GW-EHV/ESHV high voltage**
- GW-HSB high current**
- GW-K mixed contacts**
- GW-Q low voltage**

The ergonomic housing and hood have an excellent connection capacity in the metal and plastic versions (for sizes 21x21 and 32x13). The range also contains versions for standard high voltage applications 830V, heavy-duty applications, and situations requiring electromagnetic compatibility.

The closing system is available with a single lever, double lever or central locking lever.

Metal junction box range for surface mounting

The GWConnect range includes seven different sizes of junction box and connections made of die-cast aluminium alloy. Suitable for any application but ideal in the industrial sector and on-board machinery, especially in hostile working conditions. ATEX versions are available.

46 range

Watertight surface-mounting distribution and automation boards

Quicker to wire than to describe

The best of practicality.

Four ranges fitted with watertight surface-mounting boards, for automation and distribution, offered in the following typologies of materials: thermoplastic (44 CEP), glassfiber thermosetting (46 QP), painted metal (46 QM) and stainless steel (46 QX). All products of the range are characterised by a high structural resistance and by a great simplicity of rapidity of installation thanks to the Fast & Easy accessories common to the whole 46 QP, 46 QM and 46 QX Range.

These boards are available with blank or transparent door to offer the maximum flexibility and universality of the uses.

46 QP - ideal for photovoltaic applications

Up to 40% reduction on installation time

Versions with halogen-free material

EN 62208

Adjustable DIN rails and extractable metal frame

The DIN rails, adjustable and with quick locking, are supplied preassembled and ready for the automatic insertion into the bracket. The extractable frame is made with completely metallic locking elements. The support brackets for DIN rails and panels are snap fitted on the uprights.

Front panels with ¼ turn screws

The front panels are fitted with unlosable, plumbable, ¼ turn plastic closing screws. The panels with window are already complete with DIN rail. Moreover the panels of the F&E system can be fitted directly on the internal side walls of the 46 QP boards (apart from size 7 QP boards).

Accessories for increasingly versatile boards

The 46QP boards have a wide application field, thanks to the considerable range of accessories such as insulating and metal back-mounting plates, kits for moulded-case switches up to 250 A, pole-fixing kits, double DIN rails, reversible polyester and metal inner doors.

NOTE: the configurations given in the table are ONLY valid if the peak current of the indicated switch (corresponding to the assumed short-circuit current in the installation point) is NOT higher than 17kA, or if the assumed short-circuit current in the delivery point, in line with the main board switch, is NOT greater than 10kA.

Check the thermal power according to the method indicated in the Technical Catalogue.

The kits are fastened by means of uprights. The kit panels are 2-module high.

The MTX 160c and MTX 160 (both 3P and 4P) should be fastened to the DIN rail by means of the specific brackets contained in the GW D8 261 kit. The MTX 250 (both 3P and 4P), on the other hand, require the GW D8 262 kit.

The coupling of the MTX moulded-case devices on the DIN rail, using the relative residual current device, requires the use of the special brackets that can be found in the relative section of the DIN catalogue. In the case of cable entry from below, you are advised to insert a blank panel above the moulded-case/switch disconnector kit, so the wires can be pulled more easily.

The MSS switch disconnectors cannot be installed on the same DIN rail with the MTX moulded-case devices because of their different depths.

DOMO CENTER range

Flush-mounting system columns for distribution, domotics and data

A solution in harmony with the surroundings

DOMO CENTER is the system column designed by Gewiss for residential and commercial use.

This solution transforms the domestic system into a furnishing accessory, with its modern design that adapts to suit the context. It centralises and rationalises the existing services, from the most traditional to the most advanced, in one single device.

The Domo Center range is divided into 2 parts:

- **Front configuration kit** • already configured with all the necessary items for setting up the system column (with the exception of the back-mounting box)
- **Components** • the single elements needed to create any type of KIT

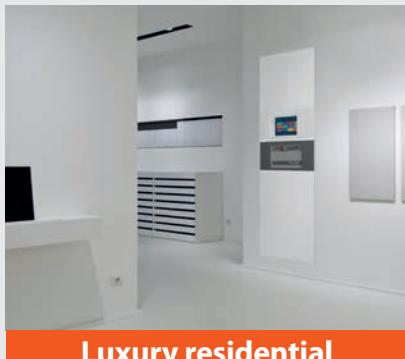

DISCOVER THE
SPECIAL SOFTWARE

Program for the cost estimate of flush-mounting system columns for distribution, domotics and data

- Flush-mounting back-mounting box, 2700 or 2400mm high
- External dimensions 2400 and 2100mm
- Protrusion of only 25mm from the wall, with suspended effect
- Modular capacity of up to 320 modules
- Versions already configured (kits) in different types

Applications

Luxury residential

Shops

Medical practices

HOW TO REQUEST THE MOST SUITABLE CONFIGURATION (KIT)

Contact Customer Service (sat@gewiss.com) or the sales organisation for cost estimates and support for configuring your system. The request procedure is facilitated by the Gweb DOMO CENTER software, available free of charge at gewiss.com.

Available finishes

DOMO CENTER can be configured in numerous solutions, with or without doors.

In fact, personalised configurations can be created by simply combining the system column with the Domo Center components. The version with door is available in three different materials: smoked transparent glass, full mirror or metal.

e.g. version 2700 with door

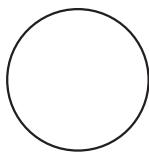

e.g. version 2400 without door

40 CD range and 40 CDi range

Flush-mounting and surface-mounting enclosures and distribution boards

Functionality and practicality in a frame

A wide range of highly specialised surface-mounting distribution boards and enclosures. The 40CD range consists of 4 product lines to satisfy every need in the residential, commercial and industrial sectors: watertight boards with an IP65 (40 CDK, 4-72 modules) and IP55 degree of protection, decorative boards with an IP40 degree of protection, and protected versions without a door, with an IP40 degree of protection.

The latter are also available with terminal blocks.

40 CDK
IP65

Versions with halogen-free material

Product lines for photovoltaic applications (40 CDK IP65 and 40 CD IP55)

40 CD
IP55

40 CD
Decorative enclosures - IP40

40 CD
without door - IP40

A wide, exhaustive range: a product for any need

The widest selection of flush-mounting distribution boards and enclosures currently available on the market.

Six product lines - including decorative enclosures - to offer the best solutions for systems in residential and advanced commercial contexts.

A range of containers with 2-72 modules (40 CDKi), suitable for a wide variety of applications thanks to the degrees of protection from IP40 to IP55 (48 PTC), and specific versions for plasterboard walls.

The range is completed with the innovative Home Networking Enclosure for network cabling.

42 RV range

Surface-mounting and flush-mounting watertight emergency enclosures

Maximum protection, safety and combination possibilities

The five emergency enclosure versions allow users to select the most appropriate product for any installation need thanks to the special pre-arrangements: for Ø22mm devices, for modular devices and devices with a back-mounting plate.

Red or grey flush-mounting versions are also available. All enclosures boast a high IP55 degree of protection and, thanks to the emergency hammer (available as an accessory) and the watertight security lock or sealable mask, are ideal for use in areas open to the public.

Increases the number of applications in the same space

The GW 42 201 enclosure comes ready fitted with a short and long push-button for deliberate and precautionary operation or real safety operation.

It also has a back-panel flange for extending the number of installable contacts to 4, thereby enhancing the possible configurations with the same product.

Renewed, to stand out

A complete system of watertight surface-mounting junction boxes made from groundbreaking materials to provide innovative solutions.

This range consists of three lines:

- boxes in GWPLAST 75 - GWT 650°C for ordinary junctions
- boxes in GWPLAST 75 - GWT 960°C for special uses (RINA certified)
- boxes in GWPLAST 120 - GWT 650°C for industrial uses

The main advantages are:

- three different types of self-extinguishing material, two of them halogen-free and the other UL94:V0
- three degrees of protection - IP44, IP55 and IP66
- 11 sizes available in two versions - with smooth walls or with the new quick-entry cable gland
- 6 types of cover: clip/screw, 1/4 turn screw, blank/transparent, plain/deep
- watertight junction boxes with a high-capacity bottom, with smooth walls (without ribs) for assembling conduits with diameters up to 50mm

Versions for photovoltaic applications

750V

Halogen Free

960°

Versions with halogen-free material

Versions with GWT 960°C material

Versions with RINA certification

Boxes fitted with the new cable gland

The new quick-entry cable gland offers high mechanical performance levels and innovative geometry for use with rigid cables and conduits, improving the practicality and reliability of the IP degree of protection.

"Spherical head" screws and box back grooves

The screws for closing the 190x140mm cover in insulating material allow the easy application of tamper-proof seals, and also double up as hinges (patented technology). The grooves on the back of the box facilitate the assembly of devices, terminal blocks and back-mounting plates

Unlosable cover and inner edge with innovative profile

The cover of 1/4 turn screws junction boxes can be easily handled in any type of installation and makes quick maintenance operations possible.

The 1/4 turn screws are also unlosable. The innovative inner edge guarantees retention of the IP degree over time.

Flush-mounting junction and modular range boxes

More space for conduits, wiring and now also for domotics

A system of flush-mounting connection and junction boxes and now also suitable for the domotics devices developed to respond to the specific installation needs of the domestic and tertiary sectors.

This system consists of three different product lines:

- 48 PT / PT DIN range: boxes for junction, connection and domotics with a mortar guard element (integrated DIN rail on the back-mounting box, starting from size no. 6) - IP40
- 48 CM range: high-capacity boxes with a protective shield - IP40
- 48 PTC range: boxes for modular junction, command and distribution, with a protective mortar guard shield - IP40/IP55

48 PT/PT DIN
for ordinary applications and domotics

48 CM
for studs

48 PTC
for special applications

GREEN WALL range

Flush-mounting system for lightweight and plasterboard walls

The most complete flush-mounting system for plasterboard

The GREEN WALL range is a new series of GEWISS products for plasterboard walls. It's the most extensive and complete flush-mounting system on the market for this specific type of installation.

The principal characteristics of the GREEN WALL range are:

- special green technopolymer with GWT 850°C (as required by product regulations) and halogen-free (in accordance with EN 50267-2-2)
- quick, easy installation thanks to the innovative fixing solutions
- mechanical robustness and reliability

The range consists of 22 new codes, sub-divided into four product lines:

- enclosures and distribution boards
- standard and high-capacity junction boxes
- boxes for modular domestic ranges and KNX/digital vision devices
- boxes for vertical and horizontal interlocked switched socket-outlets

Robust, practical boxes with firm fixing

Distinguished by their robustness and easy installation, the boxes for domestic ranges are equipped with unlosable metal clamps with tear-proof fixing, so they can be quickly and firmly attached to either single-sheet or double-sheet walls.

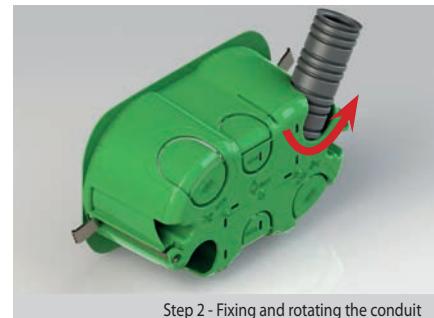

The boxes, with 3, 4 or 6 gangs, have knockouts for conduits Ø 20mm or Ø 25mm, and opening profiles for conduits Ø 16mm or Ø 32mm. Their special geometry makes it easy to insert the conduit, which is firmly held in its seat; the "L" profile of the knockouts allows the conduit to rotate in its seat, facilitating the positioning of the box in the wall cavity.

Fixing clamps

Step 1 - Inserting the conduit

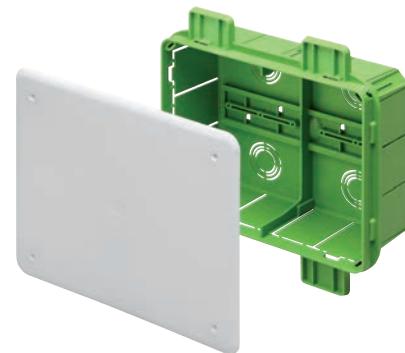

Step 2 - Fixing and rotating the conduit

The flexible, reliable fixing system

The GREEN WALL range introduces the concept of tabs for fixing enclosures, boards, boxes for interlocked switched socket-outlets, and junction boxes. The tab system is a flexible one, suitable for all assembly situations; user-friendly tabs speed up the positioning and fixing of the containers. The outer edges of all the containers have cusps: specific reference points that make it easier to mark the sheet in preparation for the cut. Depending on the specific needs, the tabs can be fixed in three different ways:

- on a metal frame:** a frame is inserted between the two vertical uprights, or an additional horizontal frame is used. The structure is created with the aid of special screws for use with plasterboard, then the back-mounting box is fixed to the frame by means of the tabs.
- on sheet:** the back-mounting box is fixed to the back of the sheet with the aid of the tabs, then anchored from the front of the sheet with special screws for use with plasterboard.
- on a masonry wall:** the back-mounting boxes have specific references so they can be fixed to masonry walls with the aid of wall plugs, after which the plasterboard sheets are positioned on top (this method is often used during renovations).

ARTICLES	ON METAL FRAME	ON SHEET	ON MASONRY WALL
Enclosures and distribution boards	✓		
Junction boxes Boxes for interlocked switched socket-outlets 67IB and 44IB	✓	✓ (with tabs*)	✓
Boxes for domestic ranges - 3/4/6 gangs Boxes for round domestic ranges - 2 and 2+2 gangs		✓ (with clamps)	
Box for domestic ranges - 8 gangs (4+4) **	✓	✓ (with tabs*)	
Box for Master and Vision Master	✓	✓ (with tabs*)	

* Tabs on the sides of the horizontal walls. Boxes (24, 36, 54, 72 modules) and box for interlocked switched socket-outlets (67 IB) equipped with fixing tabs on the sides of the vertical walls.

** Can also be used for the installation of command panels and video entryphones.

• = Suitable

Note: the 44 ME range terminal blocks with indirect screw-tightening are mounted on plates, or on the bottom of the boxes, using the suitable GW 44 682 adapter. For 48 PTC range boxes on the other hand, use code GW 44 683. The 44 ME range terminal blocks with indirect plate-tightening are mounted on the DIN rail of the 48 PT DIN boxes, using the suitable GW 44 720 support.

In yellow: same compatibility also for PT DIN GREEN WALL and CM GREEN WALL versions.

Ties

Small details can have a great impact on safety

A complete, professional range of ties.

These products are used in boards, enclosures and junction boxes as well as more general applications.

Though simple, ties are key elements for the safe operation of electrical systems.

The range consists of 6 different product lines, in versions for wiring (PA 66) and the L.T.R. family (PA 12) with double head for outdoor applications, guaranteeing the seal even under extremely heavy-duty conditions.

The high performance ties in PA12 - a highly prized material characterised by low hygroscopic capacity - are particularly suited to outdoor use, even at low temperatures.

These ties, with dimensions of 9x265mm and more, have a double head.

The range is completed with special fixing accessories.

74 PS range

Push-buttons, selectors and indicators ø 22mm

Push-buttons, selectors and indicators ø 22mm

The 74 PS range: a system of push-buttons, selectors and indicators (diameter 22mm) with an IP66 degree of protection, for creating a real interface between the man and the machine, whilst at the same time controlling the operating status of the drives and equipment to ensure the best safety standards.

Quick choice

The special feature of the 74 PS range is the ease of product configuration: the indicator lights are already fitted with a nut so they can be fixed to the panel. They have a contact-holder flange so, by adding the NO and NC contacts, you can create the specific command logic for each system.

LED technology

The products of the new 74 PS range that can be illuminated should be combined with LED lamps with BA9S coupling to guarantee top performance, 100% reliability and a longer lifespan, all of which means less maintenance too.

Quick installation

Thanks to the practical clip coupling mechanism of the contacts, panel assembly times are drastically reduced. Double contacts are also available, to increase the installation flexibility and to be able to install up to four contacts plus a space for a lamp coupling on the 3-gang flanges of the indicator lights.

(*) GW 27 111: yellow cover and grey back-mounting box, specifically for emergency push-buttons.

For all the illuminated versions, the LED lamp must be purchased separately: GW 74 515 (12V); GW 74 516 (24V); GW 74 517 (110V); GW 74 518 (230V).

RK range

Rigid protective conduit systems

Range rigid conduits

The GEWISS rigid conduits and accessories allow you to create articulated systems in optimum safety conditions, in any type of environment and for any type of installation.

The range consists of 4 types of conduits, all of which comply with standards EN 61386-1 and EN 61386-21:

RK15: 3321 classification (standard applications)

IRL/B: 3321 classification (sleeved, for standard applications)

RKB: 4321 classification (heavy-duty applications)

RKHF: 4422 classification (heavy-duty applications that require halogen-free versions for maximum safety)

Accessories

Wide range of couplings, joints and routing components for implementing complex and articulated exposed systems. Possibility of obtaining two degrees of protection: IP40 and IP67.

EN 50267-2-2

Halogen-free version

The RKHF conduits and couplings create totally halogen-free systems - the ideal solution for installations in public and crowded environments, thanks to their lower toxic emissions in the event of fire.

TRIX and QUADRIX boxes

The snap-fit assembly of boxes with specific accessories always ensures perfect watertight conditions thanks to the O-ring seal. The box cover can be assembled by simply pressing it, thus ensuring faster implementation and system inspection simplicity.

50/52 range

Accessories for electrical installations

Cable glands and couplings

A complete range of cable glands and couplings for conduits and boxes. Cable glands with metric and PG pitch (IP68) and PG pitch thread (IP66). Special accessories are also available, such as cable glands with rigid conduit housing, conduit-box couplings with IP66 and IP44 degrees of protection, and multi-diameter glands.

There is also a full selection of metal cable glands (version IP65 and IP68, complete with an o-ring gasket on the box side), closure caps and extensions IP65, and fixing nuts. All the items are made of nickel-plated brass, and are fully compatible with the connectors and metal boxes of the GW Connect range.

Fixing accessories for conduits and cables

The GEWISS system of plastic and metal fixing devices is now extended with a series of products conceived to meet every possible installation requirement and provide the ideal solution in every type of system. Designed to simplify and speed up the conduit and cable laying phases, the Gewiss range responds to the increasingly specific and specialist needs of modern systems.

Quick, safe installation is an increasingly important factor when it comes to choosing system components. To meet the need for faster installation while still maintaining high levels of reliability and safety, GEWISS also offers a range of plastic and metal supports with incorporated wall plug for conduits and cables.

FK range

Pliable protective conduit systems

FK15, ICTA and FKHF range pliable conduits

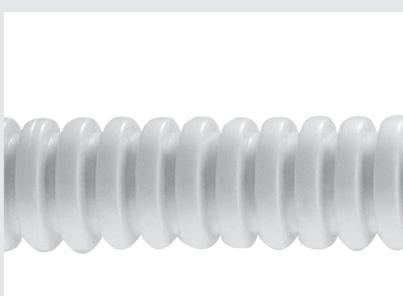

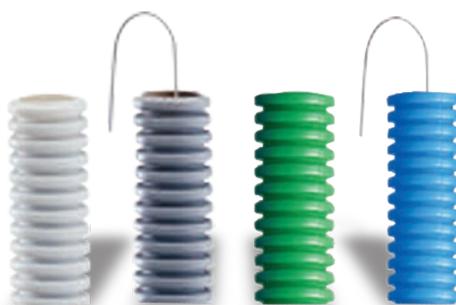

FK15 range: a range of medium corrugated conduits with 3321 classification, diameter from 16 to 63 mm, in six different colours - available in versions with or without a cable puller-feeder - for identification of the various lines in the electrical system.

The medium conduits with ICTA 3422 classification and the light conduits with FKHF 2322 classification (halogen-free in accordance with EN 50267-2-2) are ideal for installation in public environments: thanks to their halogen-free material, the smoke created in the event of a fire has lower opacity and toxic emissions.

The FK 15, ICTA and FKHF conduits comply with Standards EN 61386-1 and EN 61386-22.

Versions with
halogen-free material

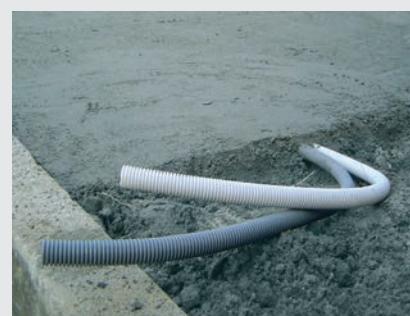

Flexibility

The profile of the FK15 conduits is characterised by a special geometry of the ribs to offer greater flexibility, higher load resistance and reduced thermal memory - characteristics that simplify and speed up the laying procedure inside the raceway.

Line identification

The wide choice of colours in the FK15 Arcobaleno range ensures a valid solution for modern electrical systems with their increasingly complex and subdivided structure, where the identification of the different lines is essential.

Higher performance

The ICTA conduit is recommended for use under the floor and in reinforced concrete. In fact, the ICTA conduit does not require any type of mechanical protection during casting. As there are no microholes, it is ideal with highly liquid concretes.

DF range

Systems of flexible protective conduits

Range of spiralled sheaths

DF range: system of spiralled sheaths with 2311 classification in 14 different diameters - from 8 to 60mm - in grey, black and blue. 12-mm, 16-mm, 20-mm and 25-mm diameters are also available in the Light version with 1311 classification for non-heavy-duty applications.

Sheaths and couplings with an IP54 degree of protection, in grey and black are available, with metric, PG and GAS thread for connecting boards, boxes and rigid conduits: a system suitable for exposed systems for all uses in the industrial and commercial sectors. Thanks to its high flexibility and resistance, the DF range is the winning solution for connecting and powering moving mechanical components.

The DF sheaths comply with Standards EN 61386-1 and EN 61386-23.

Range of access chamber systems: versatility and convenience

Available in 4 sizes - from 200 to 550mm - with high resistance and gridded covers, they are ideal for junctions, as wall chasers for electrical systems, or for telecommunication applications. Particularly suitable for public lighting systems or earth systems. Thanks to its thermoplastic materials, pre-cut base and the possibility of overlapping, the PZ range is a valid alternative to typical concrete electrical boxes, ensuring optimum resistance and unaltered long-term performance.

Range of cable ducts: flexibility of use

The special dual-wall form of the FU cable ducts, made from PEHD and available in 10 diameters (40-200mm) with built-in cable puller, allows very narrow curvature radii (8 times the outer conduit diameter) and can even be laid in excavations that are not perfectly aligned.

BFR range

Systems for metal cable trays and supports

BFR range of cable trays

BFR steel wire mesh cable trays:

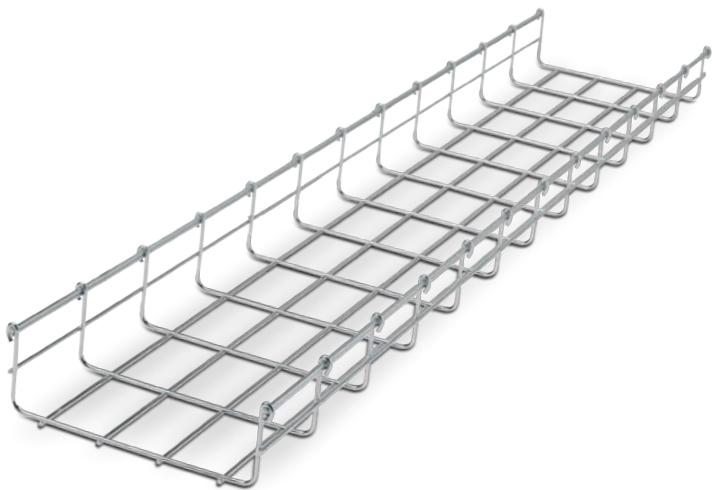

A more practical, simple and economic alternative to the traditional metal channels.

Available in heights of 30, 60 and 110mm, widths from 50 to 600mm, and 5 finishes (including the HP - High Protection - finish), ideal for outdoor use.

The snap-on supports, automatic joints and lack of routing components make installation quicker and easier, with fewer elements to be managed.

MAIN CHARACTERISTICS:

- Quick installation thanks to the automatic joints and quick connection brackets.
- Rounded edge with double side wire = enhanced safety and mechanical resistance.
- "Speedy Curva" machine for cutting and bending, available on free loan.
- Greater cable ventilation and cleanliness.

Applications

e.g. photovoltaic system

BRN range cable trays

BRN perforated sheet cable trays:

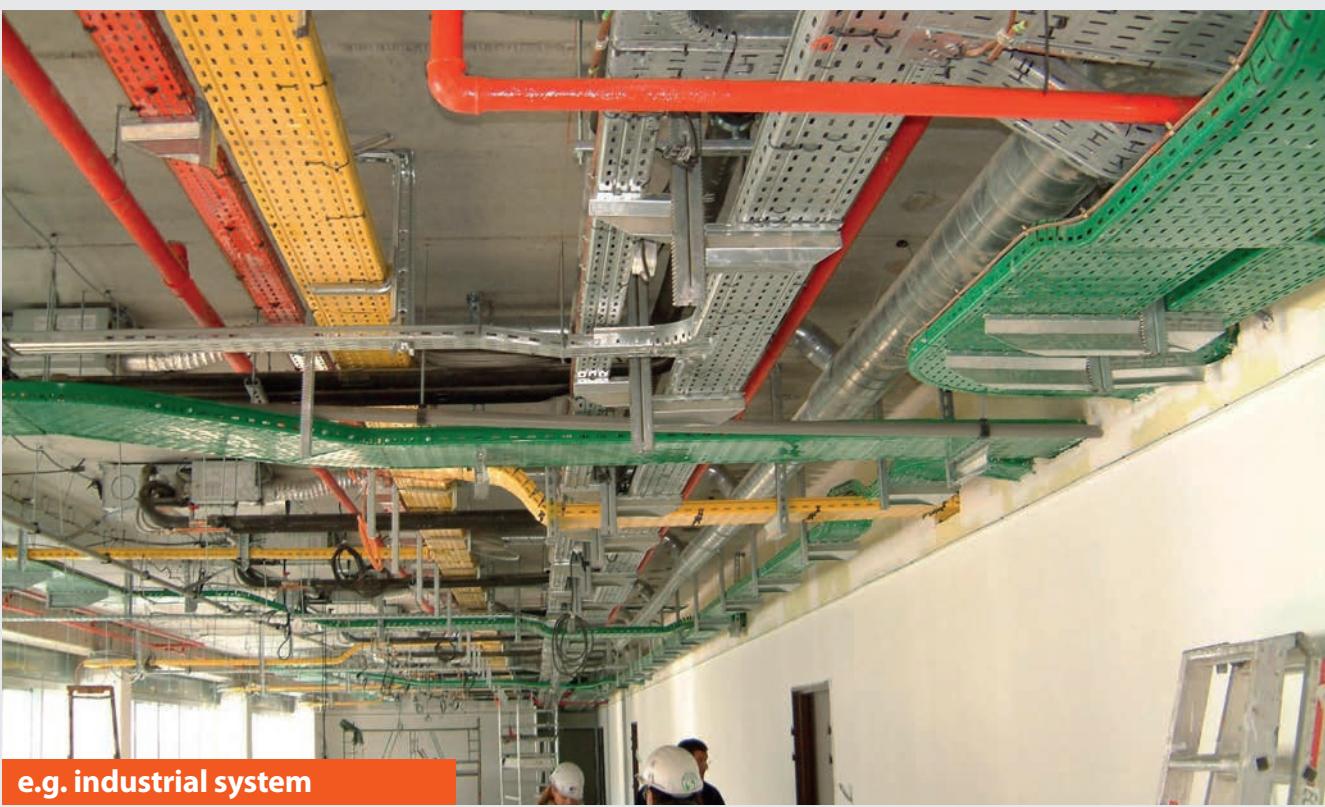

available in 4 heights (35-80mm), 12 widths (95-605mm) and 3 finishes to meet the requisites of every type of installation, from small systems to heavy industry. The BRN cable tray has ribs on the base for greater load resistance, and rounded upper edges to guarantee the safety of cables and operators.

MAIN CHARACTERISTICS:

- Ribs on the base for greater load resistance.
- Rounded upper edge for total safety.
- Quick assembly thanks to the automatic joint.
- Cover with snap-on fixing.

Applications

e.g. industrial system

BFR range
