

Dust Removal System TE DRS-4-A

VIRTUALLY DUST-FREE CORDLESS DRILLING.

The benefits of cordless are compelling: no searching for a power supply, no cord limiting where you can work and no tripping over cables.

However, these benefits aren't realised if you have to plug in a corded vacuum cleaner to remove dust as you drill - or worse still - to clean up afterwards.

With the new Dust Removal System (DRS) attachment for the Hilti TE 4-A22 Cordless rotary hammer you get all the health, safety and productivity gains of dust-free drilling in one truly cordless system.

Compact

A well balanced, ergonomically designed and lightweight attachment (weighs just 1 kg), means it is easy to remove dust at the point of impact.

Convenient

The integrated DRS attachment is powered by the rotary hammer's 22V battery, so no separate power source is required.

→ DRS

Productive

Dust clogs up tools and inserts, reducing their productivity and shortening their life span. With cleaner and sharper tools you'll get the job done faster and spend less time cleaning up afterwards.

Safe

Dust is collected at source rather than clogging up inserts, tools or your lungs - especially important when working indoors, overhead or for long periods.
