

New and improved batteries

TWO NEW BATTERIES TO MAKE YOUR TOOLS FEEL LIKE NEW.

The benefits of cordless are compelling: no cord dictating where you work, no searching for power outlets and no tripping over cables.

However, there is still a belief that cordless tools don't have the power needed for the job or that they will run out of charge before the end of the working day.

With two new batteries, compatible with our existing 22V platform, your tools will deliver even more power and last the toughest working day. Keeping you 'In Charge' of your projects.

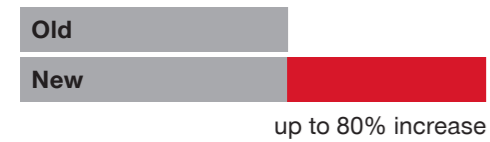

Battery pack B 22/5.2:
With 5.2 Ah there is more grunt to tackle demanding jobs with angle grinders, circular saws and heavy duty rotary hammers.

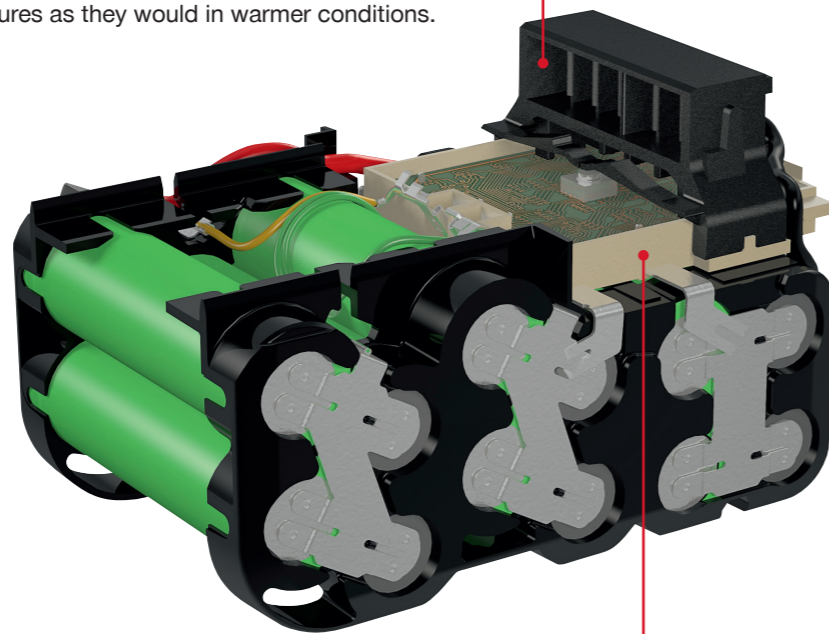

Battery pack B 22/2.6: With 2.6 Ah this battery still delivers plenty of juice but is compact and light, ideal for use with tools such as drills, drivers, impact wrenches and small rotary hammers.

Advanced battery technology

Longer lasting:
This is our longest lasting 22V battery ever. Increase runtime by up to 80%.

Sub-zero temperatures:
The Low Temperature Module (LTM) delivers the same level of power and runtime in sub-zero temperatures as they would in warmer conditions.

Drop and impact resistant:
Redesigned cage and cell positioning provide extreme protection against drops and impact, ensuring your tools are as tough as any jobsite.

Water and dust resistant:
Our electronics are fully sealed against moisture, water and dust to ensure your tools keep working with you in the harshest conditions.

20+ TOOLS

Make it fit

We've built our new batteries to be 100% compatible with our existing chargers and all of the tools on the 22V platform. So this isn't just the launch of two new batteries, with more power and longer runtime, all your existing tools will also feel like new.

Cordless. In Charge.

Product advice

Account Managers and available on-site to help you choose the right cordless solution for your business and demonstrate the technology under real jobsite conditions.
