

Rolec Provides Smart Card Metering for Gatton Waters' Ambitious Site Refurbishment

ROLEC CARAVAN HOOK-UPS

Gatton Waters

Run by the Donaldson family for over three decades, Gatton Waters' 24-acre site is nestled in the heart of the West Norfolk countryside, just a short drive from Norfolk's famous coastline.

Each of the park's over 100 caravan pitches boast views of the beautiful 8-acre coarse fishing lake (great news for fans of Carp, Roach, and Bream) and the surrounding wildlife.

Scope

Over the winter, the team at Gatton Waters took on the massive undertaking of completely refurbishing the site ready for their reopening in time for the busy season in Spring 2023.

Solution

118 bespoke Smart Meter hook-ups and smart cards (29 units) and supporting software.

Rolec bespoke made all the 4-point smart meter hook-ups and upgraded all of the earthing points at the meters.

Within two weeks, the team had removed the site's old 10amp hook-ups and replaced them with our bespoke manufactured 16amp smart meter hook-ups. Also upgrading the earthing points at the meters.

Benefit

Park operators have better control over electricity pricing and overall park management.

Project details

Organisation:

- Gatton Waters

Partners:

- Rolec Leisure

Industries:

- Holiday Park
- Leisure

Location:

King's Lynn, West Norfolk

“We chose Rolec to install 118 smart meter hook-ups to our caravan site in Norfolk. The guys who carried out the work were on site by 7:30am each morning and worked right through the day. Hard working, polite and professional.

The work carried out was very good and all units look great and were installed to a high standard. On completion they supplied all certification and ran through the process of how to use the card reader and software on our computer. Cannot fault them at all, and they were definitely value for money, as the units fitted were of very high quality. Aftersales service was also excellent. Faultless.”

Mark Donaldson, Gatton Waters

Project details
