

"We were restricted to one electricity tariff with our storage heaters, which meant we never had heat when we needed it the most. By switching to the Rointe connected D Series heating system, we can now maintain a comfortable environment for our visitors that was so easy to install."

Storage heaters substitution

Historical building

in Woodhouse, Leicestershire

A beautiful heating system for 24/7 comfort.

This Victorian country house previously used a storage heater system for their heating needs. However, catering for large-scale events held during day and night, meant that they were no longer suitable and a replacement needed to be found.

The owners were looking for a stylish heating system that would fit with the interior aesthetics and importantly, would not need an Economy 7 electricity tariff.

THE SOLUTION

Based on the nature of these large premises, Rointe conducted a thorough Technical Study to recommend a suitable storage heater alternative. The D Series was chosen to seamlessly fit into the décor of the rooms.

THE RESULT

As storage heaters draw electricity through a cheaper night rate and store for inefficient daytime heat, the project owner was confined to an Economy 7 tariff and bulky, unattractive heaters. By installing the D Series radiators, they could switch to an economical tariff and maintain temperature control from their smartphones, individually or collectively.

STYLISH ALTERNATIVE

The installation of the D Series connected heating system meant an aesthetic alternative, with complete heating control, to storage heaters that wasted energy and left rooms cold when the temperature outside dropped.

PROJECT FEATURES

Project owner	Historical building
Location	Leicestershire
Heating system installed	D Series
Number of products installed	40
Year	2017
