

SWA's patented new Cable Companion solves the problem of cables snagging on the drum, saving busy installers time and money.

Its simple but ingenious swinging tension arm keeps cable properly wound on its reel at all times - even when its not being pulled.

Reels are securely mounted on Cable Companion with a strong, easy-to-use catch.

Its 360-degree rotational design means that cable can be pulled in any direction or to any height. Alternatively, the dispenser can be locked in one position.

Cable Companion features a sturdy and stable floor-standing frame, but the range also includes a special bracket for clamping the dispenser to joists, so it's ideal for use in lofts, too.

Cable Companion easily folds away flat, making it convenient to transport and store. Built to last, its robust metal construction will give many years of service.
