Safety Notes

General Power Tool Safety Warnings

⚠ WARNING Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

Save all warnings and instructions for future reference.

The term "power tool" in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

Work area safety

- ▶ **Keep work area clean and well lit.** Cluttered or dark areas invite accidents.
- ▶ **Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust.** Power tools create sparks which may ignite the dust or fumes.
- ▶ **Keep children and bystanders away while operating a power tool.** Distractions can cause you to lose control.

Electrical safety

- ▶ **Power tool plugs must match the outlet. Never modify the plug in any way. Do not use any adapter plugs with earthed (grounded) power tools.** Unmodified plugs and matching outlets will reduce risk of electric shock.
- ▶ **Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators.** There is an increased risk of electric shock if your body is earthed or grounded.
- ▶ **Do not expose power tools to rain or wet conditions.** Water entering a power tool will increase the risk of electric shock.
- ▶ **Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges and moving parts.** Damaged or entangled cords increase the risk of electric shock.

- ▶ **When operating a power tool outdoors, use an extension cord suitable for outdoor use.** Use of a cord suitable for outdoor use reduces the risk of electric shock.
- ▶ **If operating a power tool in a damp location is unavoidable, use a residual current device (RCD) protected supply.** Use of an RCD reduces the risk of electric shock.

Personal safety

- ▶ **Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication.** A moment of inattention while operating power tools may result in serious personal injury.
- ▶ **Use personal protective equipment. Always wear eye protection.** Protective equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.
- ▶ **Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or battery pack, picking up or carrying the tool.** Carrying power tools with your finger on the switch or energising power tools that have the switch on invites accidents.
- ▶ **Remove any adjusting key or wrench before turning the power tool on.** A wrench or a key left attached to a rotating part of the power tool may result in personal injury.
- ▶ **Do not overreach. Keep proper footing and balance at all times.** This enables better control of the power tool in unexpected situations.
- ▶ **Dress properly. Do not wear loose clothing or jewellery. Keep your hair, clothing and gloves away from moving parts.** Loose clothes, jewellery or long hair can be caught in moving parts.
- ▶ **If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used.** Use of dust collection can reduce dust-related hazards.

Power tool use and care

- ▶ **Do not force the power tool. Use the correct power tool for your application.** The correct power tool will do the job better and safer at the rate for which it was designed.
- ▶ **Do not use the power tool if the switch does not turn it on and off.** Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- ▶ **Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools.** Such preventive safety measures reduce the risk of starting the power tool accidentally.
- ▶ **Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool.** Power tools are dangerous in the hands of untrained users.
- ▶ **Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tool's operation. If damaged, have the power tool repaired before use.** Many accidents are caused by poorly maintained power tools.

- **Keep cutting tools sharp and clean.** Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.
- **Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the work to be performed.** Use of the power tool for operations different from those intended could result in a hazardous situation.

Service

- **Have your power tool serviced by a qualified repair person using only identical replacement parts.** This will ensure that the safety of the power tool is maintained.

Hammer Safety Warnings

- **Wear ear protectors.** Exposure to noise can cause hearing loss.
- **Use auxiliary handle(s), if supplied with the tool.** Loss of control can cause personal injury.
- **Hold the tool by the insulated gripping surfaces when performing operations where the application tool or the screw could contact hidden wiring or its own power cord.** Contact with a "live" wire will also make exposed metal parts of the power tool "live" and shock the operator.
- **Use suitable detectors to determine if utility lines are hidden in the work area or call the local utility company for assistance.** Contact with electric lines can lead to fire and electric shock. Damaging a gas line can lead to explosion. Penetrating a water line causes property damage or may cause an electric shock.
- **When working with the machine, always hold it firmly with both hands and provide for a secure stance.** The power tool is guided more secure with both hands.
- **Secure the workpiece.** A workpiece clamped with clamping devices or in a vice is held more secure than by hand.
- **Always wait until the machine has come to a complete stop before placing it down.** The tool insert can jam and lead to loss of control over the power tool.

Products sold in GB only: Your product is fitted with a BS 1363/A approved electric plug with internal fuse (ASTA approved to BS 1362). If the plug is not suitable for your socket outlets, it should be cut off and an appropriate plug fitted in its place by an authorised customer service agent. The replacement plug should have the same fuse rating as the original plug. The severed plug must be disposed of to avoid a possible shock hazard and should never be inserted into a mains socket elsewhere.

Products sold in AUS and NZ only: Use a residual current device (RCD) with a rated residual current of 30 mA or less.

Product Description and Specifications

Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

While reading the operating instructions, unfold the graphics page for the machine and leave it open.

Intended Use

GBH 2-26 E/RE

The machine is intended for hammer drilling in concrete, brick and stone. It is also suitable for drilling without impact in wood, metal, ceramic and plastic. Machines with electronic control and right/left rotation are also suitable for screwdriving.

GBH 2-26 DE/DRE/DFR

The machine is intended for hammer drilling in concrete, brick and stone, as well as for light chiselling work. It is also suitable for drilling without impact in wood, metal, ceramic and plastic. Machines with electronic control and right/left rotation are also suitable for screwdriving.

Product Features

The numbering of the product features refers to the illustration of the machine on the graphics page.

- 1 Quick change keyless chuck (GBH 2-26 DFR)
- 2 SDS-plus quick change chuck (GBH 2-26 DFR)
- 3 SDS-plus tool holder
- 4 Dust protection cap
- 5 Locking sleeve
- 6 Lock ring for rapid-change chuck (GBH 2-26 DFR)
- 7 Rotational direction switch (GBH 2-26 RE/DRE/DFR)
- 8 Lock-on button for On/Off switch
- 9 On/Off switch
- 10 Release button for mode selector switch (GBH 2-26 DE/DRE/DFR)
- 11 Mode selector switch (GBH 2-26 DE/DRE/DFR)
- 12 Button for depth stop adjustment
- 13 Depth stop
- 14 Auxiliary handle (insulated gripping surface)
- 15 Release button for drilling/hammer drilling selector switch (GBH 2-26 E/RE)
- 16 Selector switch for drilling/hammer drilling (GBH 2-26 E/RE)
- 17 Handle (insulated gripping surface)
- 18 Securing screw for key type drill chuck*
- 19 Key type drill chuck*
- 20 SDS-plus adapter shank for drill chuck*
- 21 Drill chuck mounting (GBH 2-26 DFR)
- 22 Front sleeve of the quick change keyless chuck (GBH 2-26 DFR)
- 23 Retaining ring of the quick change keyless chuck (GBH 2-26 DFR)
- 24 Extraction sleeve of the dust extraction attachment*

- 25 Clamping screw for the dust extraction attachment*
 26 Depth stop of the dust extraction attachment*
 27 Telescopic pipe of the dust extraction attachment*
 28 Wing bolt of the dust extraction attachment*

- 29 Guide pipe of the dust extraction attachment*
 30 Universal bit holder with SDS-plus shank*

*Accessories shown or described are not part of the standard delivery scope of the product. A complete overview of accessories can be found in our accessories program.

Noise/Vibration Information

Rotary Hammer GBH ...		2-26 E	2-26 RE	2-26 DE	2-26 DRE	2-26 DFR
Measured sound values determined according to EN 60745.						
Typically the A-weighted noise levels of the product are						
Sound pressure level	dB(A)	91	91	91	91	91
Sound power level	dB(A)	102	102	102	102	102
Uncertainty K	dB	3	3	3	3	3
Wear hearing protection!						
Vibration total values a_h (triax vector sum) and uncertainty K determined according to EN 60745:						
Hammer drilling in concrete:						
a_h	m/s ²	17,5	17,5	17,5	17,5	16,5
K	m/s ²	1,5	1,5	1,5	1,5	1,5
Chiselling:						
a_h	m/s ²	–	–	14	14	14
K	m/s ²	–	–	1,5	1,5	1,5

The vibration level given in this information sheet has been measured in accordance with a standardised test given in EN 60745 and may be used to compare one tool with another. It may be used for a preliminary assessment of exposure. The declared vibration emission level represents the main applications of the tool. However if the tool is used for different applications, with different accessories or insertion tools or is

poorly maintained, the vibration emission may differ. This may significantly increase the exposure level over the total working period.

An estimation of the level of exposure to vibration should also take into account the times when the tool is switched off or when it is running but not actually doing the job. This may significantly reduce the exposure level over the total working period.

Identify additional safety measures to protect the operator from the effects of vibration such as: maintain the tool and the accessories, keep the hands warm, organisation of work patterns.

Declaration of Conformity

We declare under our sole responsibility that the product described under "Technical Data" is in conformity with the following standards or standardization documents: EN 60745 according to the provisions of the directives 2011/65/EU, 2004/108/EC, 2006/42/EC.

Technical file (2006/42/EC) at:

Leinfelden, 02.12.2013

Assembly

► **Before any work on the machine itself, pull the mains plug.**

Auxiliary Handle

► **Operate your machine only with the auxiliary handle 14.**

Changing the position of the auxiliary handle (see figure A)

The auxiliary handle **14** can be set to any position for a secure and low-fatigue working posture.

- Turn the bottom part of the auxiliary handle **14** in counter-clockwise direction and swivel the auxiliary handle **14** to the desired position. Then retighten the bottom part of the auxiliary handle **14** by turning in clockwise direction. Pay attention that the clamping band of the auxiliary handle is positioned in the groove on the housing as intended for.

Adjusting the Drilling Depth (see figure B)

The required drilling depth **X** can be set with the depth stop **13**.

- Press the button for the depth stop adjustment **12** and insert the depth stop into the auxiliary handle **14**. The knurled surface of the depth stop **13** must face downward.
- Insert the SDS-plus drilling tool to the stop into the SDS-plus tool holder **3**. Otherwise, the movability of the SDS-plus drilling tool can lead to incorrect adjustment of the drilling depth.
- Pull out the depth stop until the distance between the tip of the drill bit and the tip of the depth stop correspond with the desired drilling depth **X**.

Selecting Drill Chucks and Tools

For hammer drilling and chiselling, SDS-plus tools are required that are inserted in the SDS-plus drill chuck.

For drilling without impact in wood, metal, ceramic and plastic as well as for screwdriving, tools without SDS-plus are used (e.g., drills with cylindrical shank). For these tools, a keyless chuck or a key type drill chuck are required.

GBH 2-26 DFR: The SDS-plus quick change chuck **2** can easily be replaced against the quick change keyless chuck **1** provided.

Changing the Key Type Drill Chuck (GBH 2-26 E/RE/DE/DRE)

To work with tools without SDS-plus (e.g., drills with cylindrical shank), a suitable drill chuck must be mounted (key type drill chuck or keyless chuck, accessories).

Mounting the Key Type Drill Chuck (see figure C)

- Screw the SDS-plus adapter shank **20** into a key type drill chuck **19**. Secure the key type drill chuck **19** with the securing screw **18**. **Please observe that the securing screw has a left-hand thread.**

Inserting the Key Type Drill Chuck (see figure C)

- Clean the shank end of the adapter shank and apply a light coat of grease.
- Insert the key type drill chuck with the adapter shank into the tool holder with a turning motion until it automatically locks.
- Check the locking effect by pulling the key type drill chuck.

Removing the Key Type Drill Chuck

- Push the locking sleeve **5** toward the rear and pull out the key type drill chuck **19**.

Removing/Inserting the Quick Change Chuck (GBH 2-26 DFR)

Removing the Quick Change Chuck (see figure D)

- Pull the lock ring for the quick change chuck **6** toward the rear, hold it in this position and pull off the SDS-plus quick change chuck **2** or the quick change keyless chuck **1** toward the front.
- After removing, protect the replacement chuck against contamination.

Inserting the Quick Change Chuck (see figure E)

- Before inserting, clean the quick change chuck and apply a light coat of grease to the shank end.
- Grasp the SDS-plus quick change chuck **2** or the quick change keyless chuck **1** completely with your hand. Slide the quick change chuck with a turning motion onto the drill chuck mounting **21** until a distinct latching noise is heard.
- The quick change chuck is automatically locked. Check the locking effect by pulling the quick change chuck.

Changing the Tool

The dust protection cap **4** largely prevents the entry of drilling dust into the tool holder during operation. When inserting the tool, take care that the dust protection cap **4** is not damaged.

► **A damaged dust protection cap should be changed immediately. We recommend having this carried out by an after-sales service.**

Inserting SDS-plus Drilling Tools (see figure F)

The SDS-plus drill chuck allows for simple and convenient changing of drilling tools without the use of additional tools.

- GBH 2-26 DFR: Insert the SDS-plus quick change chuck **2**.
- Clean and lightly grease the shank end of the tool.
- Insert the tool in a twisting manner into the tool holder until it latches itself.
- Check the latching by pulling the tool.

As a requirement of the system, the SDS-plus drilling tool can move freely. This causes a certain radial run-out at no-load, which has no effect on the accuracy of the drill hole, as the drill bit centres itself upon drilling.

Removing SDS-plus Drilling Tools (see figure G)

- Push back the locking sleeve **5** and remove the tool.

Inserting Drilling Tools without SDS-plus (GBH 2-26 E/RE/DE/DRE)

Note: Do not use tools without SDS-plus for hammer drilling or chiselling! Tools without SDS-plus and their drill chucks are damaged by hammer drilling or chiselling.

- Insert a key type drill chuck **19** (see “Changing the Key Type Drill Chuck”, page 16).
- Open the key type drill chuck **19** by turning until the tool can be inserted. Insert the tool.
- Insert the chuck key into the corresponding holes of the key type drill chuck **19** and clamp the tool uniformly.
- GBH 2-26 E/RE: Set the selector switch **16** to the “Drilling” symbol.
- GBH 2-26 DE/DRE: Turn the mode selector switch **11** to the “drilling” position.

Removing Drilling Tools without SDS-plus (GBH 2-26 E/RE/DE/DRE)

- Turn the sleeve of the key type drill chuck **19** with the drill chuck key in anticlockwise direction until the drilling tool can be removed.

Inserting Drilling Tools without SDS-plus (GBH 2-26 DFR) (see figure H)

Note: Do not use tools without SDS-plus for hammer drilling or chiselling! Tools without SDS-plus and their drill chucks are damaged by hammer drilling or chiselling.

- Insert the quick change keyless chuck **1**.
- Firmly hold the retaining ring **23** of the quick change chuck. Open the tool holder by turning the front sleeve **22** until the tool can be inserted. Tightly hold the retaining ring **23** and firmly turn the front sleeve **22** in the direction of the arrow until a distinct latching noise can be heard.
- Check the tight seating by pulling the tool.

Note: If the tool holder was opened to the stop, then the latching noise possibly may be heard while closing the tool holder

and the tool holder will not close.

In this case, turn the front sleeve **22** once in the opposite direction of the arrow. Afterwards, the tool holder can be closed (tightened) again.

- Turn the mode selector switch **11** to the “drilling” position.

Removing Drilling Tools without SDS-plus (GBH 2-26 DFR) (see figure I)

- Firmly hold the retaining ring **23** of the quick change chuck. Open the tool holder by turning the front sleeve **22** in the direction of the arrow until the tool can be removed.

Dust Extraction with the Dust Extraction Attachment (Accessory)

► Dusts from materials such as lead-containing coatings, some wood types, minerals and metal can be harmful to one's health. Touching or breathing-in the dusts can cause allergic reactions and/or lead to respiratory infections of the user or bystanders.

Certain dusts, such as oak or beech dust, are considered as carcinogenic, especially in connection with wood-treatment additives (chromate, wood preservative). Materials containing asbestos may only be worked by specialists.

- As far as possible, use a dust extraction system suitable for the material.
- Provide for good ventilation of the working place.
- It is recommended to wear a P2 filter-class respirator.

Observe the relevant regulations in your country for the materials to be worked.

► **Prevent dust accumulation at the workplace.** Dusts can easily ignite.

Mounting the Dust Extraction Attachment (see figure J)

For dust extraction, the dust extraction attachment (accessory) is required. When drilling, the dust extraction attachment retracts so that the attachment head is always close to the surface at the drill hole.

- Press the button for depth stop adjustment **12** and remove the depth stop **13**. Press button **12** again and insert the dust extraction attachment into the auxiliary handle **14** from the front.
- Connect an extraction hose (diameter 19 mm, accessory) to the extraction sleeve **24** of the dust extraction attachment.

The vacuum cleaner must be suitable for the material being worked.

When vacuuming dry dust that is especially detrimental to health or carcinogenic, use a special vacuum cleaner.

Adjusting the Drilling Depth on the Dust Extraction Attachment (see figure K)

The required drilling depth **X** can also be adjusted when the dust extraction attachment is mounted.

- Insert the SDS-plus drilling tool to the stop into the SDS-plus tool holder **3**. Otherwise, the movability of the SDS-plus drilling tool can lead to incorrect adjustment of the drilling depth.
- Loosen the wing bolt **28** on the dust extraction attachment.
- Without switching the power tool on, apply it firmly to the drilling location. The SDS-plus drilling tool must face against the surface.

- Position the guide pipe **29** of the dust extraction attachment in its holding fixture in such a manner that the head of the dust extraction attachment faces against the surface to be drilled. Do not slide the guide pipe **29** further over the telescopic pipe **27** of the dust extraction attachment than required, so that as much as possible of the scale **27** on the telescopic pipe remains visible.
- Retighten the wing bolt **28** again. Loosen the clamping screw **25** on the depth stop of the dust extraction attachment.
- Move the depth stop **26** on the telescopic pipe **27** in such a manner that the clearance **X** shown in the figure corresponds to the required drilling depth.
- Tighten the clamping screw **25** in this position.

Operation

Starting Operation

- **Observe correct mains voltage! The voltage of the power source must agree with the voltage specified on the nameplate of the machine. Power tools marked with 230 V can also be operated with 220 V.**

Setting the operating mode

GBH 2-26 E/RE:

With the selector switch for drilling/hammer drilling **16**, the operating mode of the machine is selected.

- To change the operating mode, press the release button **15** and turn the drilling/hammer drilling selector switch **16** to the desired position until it can be heard to latch.

GBH 2-26 DE/DRE/DFR:

The operating mode of the power tool is selected with the mode selector switch **11**.

- To change the operating mode, push the release button **10** and turn the mode selector switch **11** to the requested position until it can be heard to latch.

Note: Change the operating mode only when the machine is switched off! Otherwise, the machine can be damaged.

GBH 2-26 E/RE

Position for **hammer drilling** in concrete or stone

GBH 2-26 DE/DRE/DFR

Position for **drilling** without impact in wood, metal, ceramic and plastic as well as for screw-driving

Vario-Lock position for adjustment of the chiselling position
The mode selector switch **11** does not latch in this position.

Position for **chiselling**

Reversing the rotational direction (GBH 2-26 RE/DRE/DFR)

The rotational direction switch **7** is used to reverse the rotational direction of the machine. However, this is not possible with the On/Off switch **9** actuated.

- **Right rotation:** Turn the selector switch for drilling/hammer drilling **7** on both sides to the stop in the position .

- **Left rotation:** Turn the selector switch for drilling/hammer drilling **7** on both sides to the stop in the position .

- Set the direction of rotation for hammer drilling, drilling and chiselling always to right rotation.

Switching On and Off

- To **start** the machine, press the On/Off switch **9**.
- To **lock** the On/Off switch, keep it pressed and additionally push the lock-on button **8**.
- To **switch off** the machine, release the On/Off switch **9**. When the On/Off switch **9** is locked, press it first and then release it.

To save energy, only switch the power tool on when using it.

Setting the Speed/Impact Rate

The speed/impact rate of the switched on power tool can be variably adjusted, depending on how far the On/Off switch **9** is pressed.

Light pressure on the On/Off switch **9** results in low speed/impact rate. Further pressure on the switch increases the speed/impact rate.

Safety Clutch

- **If the tool insert becomes caught or jammed, the drive to the drill spindle is interrupted. Because of the forces that occur, always hold the power tool firmly with both hands and provide for a secure stance.**
- **If the power tool jams, switch the machine off and loosen the tool insert. When switching the machine on with the drilling tool jammed, high reaction torques can occur.**

Working Advice

- **Before any work on the machine itself, pull the mains plug.**

Changing the Chiselling Position (Vario-Lock) (GBH 2-26 DE/DRE/DFR)

The chisel can be locked in 36 positions. In this manner, the optimum working position can be set for each application.

- Insert the chisel into the tool holder.
- Turn the mode selector switch **11** to the “Vario-Lock” position (see “Setting the operating mode”, page 18).
- Turn the tool holder to the desired chiselling position.
- Turn the mode selector switch **11** to the “chiselling” position. The tool holder is now locked.
- For chiselling, set the rotation direction to right rotation.

Inserting Screwdriver Bits (see figure L)

- **Apply the power tool to the screw/nut only when it is switched off.** Rotating tool inserts can slip off.

To work with screwdriver bits, a universal bit holder **30** with SDS-plus shank (accessory) is required.

- Clean the shank end of the adapter shank and apply a light coat of grease.
- Insert the universal bit holder with a turning motion into the tool holder until it automatically locks.
- Check the locking effect by pulling the universal bit holder.
- Insert a screwdriver bit into the universal bit holder. Use only screwdriver bits that match the screw head.
- To remove the universal bit holder, pull the locking sleeve **5** toward the rear and remove the universal bit holder **30** out of the tool holder.

Maintenance and Service

Maintenance and Cleaning

- **Before any work on the machine itself, pull the mains plug.**
- **For safe and proper working, always keep the machine and ventilation slots clean.**
- **A damaged dust protection cap should be changed immediately. We recommend having this carried out by an after-sales service.**
- Clean the tool holder **3** each time after using.

If the replacement of the supply cord is necessary, this has to be done by Bosch or an authorized Bosch service agent in order to avoid a safety hazard.

After-sales Service and Application Service

In all correspondence and spare parts order, please always include the 10-digit article number given on the type plate of the machine.

Our after-sales service responds to your questions concerning maintenance and repair of your product as well as spare parts. Exploded views and information on spare parts can also be found under:

www.bosch-pt.com

Bosch's application service team will gladly answer questions concerning our products and their accessories.

Disposal

The machine, accessories and packaging should be sorted for environmental-friendly recycling.

Do not dispose of power tools into household waste!

Only for EC countries:

According to the European Directive 2012/19/EU for Waste Electrical and Electronic Equipment and its implementation into national right, power tools that are no longer usable must be collected separately and disposed of in an environmentally correct manner.

Subject to change without notice.
