

the ORBIX RANGE

The most important, unique feature of the Orbix fasteners is the low profile, flat head design - combining a standard drive recess with the flat wafer head to provide a neat, unobtrusive fixing.

The Orbix™ Advantage...

...a low profile wafer head

- ⊕ **Flat Top means no chafing or snagging cables**
- ⊕ **Flat underside - means large bearing surface, no buckling of accessories, no washer required**

In addition to the flat head, the Orbix range has been developed to help speed up installation time for electricians. Orbix fasteners are not just general fixings for the construction industry - they have been carefully designed with the common fixing applications in mind and with a view to providing an efficient, reliable connection.

- ⊕ **APPLICATION SPECIFIC -**
Designed and manufactured specifically for electricians
- ⊕ **TIME SAVING -**
Orbix fasteners complete the fixing task quickly and effectively
- ⊕ **COST EFFECTIVE -**
The Orbix fasteners combine several features in one component
