

Radio Frequency Smoke Alarms

The Hispec range of radio frequency smoke and heat alarms have been introduced to satisfy the demand for smoke detection without damaging existing decoration. This is a combined unit where the alarm head and radio base come as one. The wireless components have been integrated into the base of the alarm which allows for the sensor to simply click onto the fast fix base making installation both simple and quick. The design also makes changing the battery a straight forward operation, with the new base doubling up as a pattress.

Up to 20 wireless smoke and heat alarms can interconnect, using dip switches, on the same radio frequency range.

This new unit can still interconnect via the white cable with our standard smoke, heat and carbon detectors.

Features:

Easy To Install

Interconnect Up To 20 Wireless Detectors

Range over 80m in Open Areas

Insect Proof

Test Function/Hush Feature
